Expedito's Question	Xanana's Answer
Recently chief negotiator met with the president and told him about 30%?	Only conveying the problem of the part that we have bought and about the calendar and timeframe, why did I deliver it there because I also told it to the prime minister. If everything runs smoothly, by the end of 2021 we start, at the end of 2025 we are finished, and in 2026 Gas will come and money will go into the Petroleum Fund.
If we buy a 30% share \$350 million, can it be said that included package includes that the pipeline will come or will this be a long process?	No, buying means it will not go to Darwin, why? Because who supports this? ConocoPhillips supports this. Therefore, buying means that the ConocoPhillips is no longer there to support Darwin, now it doesn't exist. Well, now it is still there because we have not paid yet, we have to pay first, then we can say that this is ours.
In some public opinions, it is often said that \$350 million for 30% is a very cheap price, does this mean that ConocoPhillips does not trust Timor-Leste's economy? Or another question? Why did they sell it?	That, fine, wait... I don't believe, with English I say "I don't care." Because we fought for 24 years and many people didn't have faith, I say "I don't care, I will win." Now if some Timorese do not believe, it is not my problem: "I don't care."
