FOREWORD

The statistics in *Timor-Leste's National Accounts for 2000-2019* (TL-NA 2000-2019) represent a comprehensive and consistent set of macroeconomic accounts for information, analysis and research, and policymaking purposes. Methodological notes on the concepts, classifications, methods, and sources used in Timor-Leste's national accounts are available on the website of the General Directorate of Statistics (GDS), Ministry of Finance which can be accessed at www.statistics.gov.tl.¹

TL-NA 2019 is the fourth *follow-up compilation* after the second *benchmark compilation* since the independence of Timor-Leste, and it considers 2015 as the base year (2015=100) for the measure at constant prices. The first one was TL-NA 2010 that established 2010 as the base year. Benchmark compilation has the purpose of getting the *best level* of the GDP and other associated macro magnitudes. Follow-up compilation, like TL-NA 2019, measures the *best change* in the GDP from 2015, and all the other macro aggregates related to it.

TL's NA 2000-2019 has been produced by the staff of the GDS of the Ministry of Finance under the supervision of the Director-General of Statistics, Elias Dos Santos Ferreira, with the support of the National Accounts Advisor.

The macroeconomic accounts in TL-NA 2000-2019 are based on the economic data collected through censuses and surveys, including the report on the Business Activity Survey, Government's Incomes and Expenditures, External Trade Statistics, the Consumer Price Index and other statistics.

Timor-Leste's National Accounts 2000-2019 are compiled following the United Nations *System of National Accounts 2008* (2008 SNA). This publication includes an integrated set of accounts; including estimates of Gross Domestic Product (GDP) compiled using three compilation approaches - production, expenditure, and income.

It further extends the GDP estimates to Gross National Income (GNI), Gross National Disposable Income (GNDI) and Gross Saving, and all compiled under the concepts and definitions of the 2008 SNA.

I want to express my appreciation to the General Directorate of Statistics, Ministry of Finance for the successful implementation of the project, and to the many individuals who contributed to this work.

Sara Lobo Brites
Vice Minister of Finance
October 2020

¹ Timor-Leste National Accounts 2004-2010, Volume II, Methodological notes on the concepts, methods, National Directorate of Statistics, May 2012, available online at: <http://www.statistics.gov.tl/wp-content/uploads/2013/11/TIMOR-LESTE NATIONAL ACCOUNTS 2004-2010 VOLUME II.pdf>

PREFACE

The publication of *Timor-Leste's National Accounts for 2000-2019* (TL-NA 2000-2019) represents a significant further step by the General Directorate of Statistics (GDS) under the Ministry of Finance in the production, analysis, and dissemination of key economic statistics of Timor-Leste.

The publication comprises this printed publication that contains all the statistics and a summary of the data, and an online version accessible at www.statistics.gov.tl. The Statistics website also includes extra information about the concepts, classifications, sources and methods that underpin the compilation of Timor-Leste's national accounts.

This publication contains estimates of Gross Domestic Product (GDP), Gross National Income (GNI), Gross National Disposable Income (GNDI), and Gross Saving to give a complete picture of the relationship between product, income and saving aggregates for Timor-Leste. The TL-NA includes a stylised version of the *quarterly GDP indicator* (qGDPi), expenditure approach, from 2010 onwards.

All the estimates have been calculated by the most current international standards and classifications for compiling macroeconomic accounts. These are the *System of National Accounts 2008 (SNA 2008)*² and the sixth edition of the *Balance of Payments and International Investment Position Manual (BPM6)*, International Monetary Fund (IMF).

The *headline* GDP for TL-NA 2000-2019 is the GDP expenditure. Even though the production approach has primary sources as good as the expenditure approach in nominal terms, the expenditure approach has been chosen over the production approach because it makes use of higher quality price data sets to get results in constant terms.

Regarding the revision policy of the Timor-Leste National Accounts, TL-NA 2000-2019 includes updated primary sources and improvements in methods. Some numbers could be different if we compare them with TL-NA 2000 – 2018. The main changes in the underlying sources are updated international prices following the World Economic Outlook from IMF and updated compilations for agriculture production from FAO. For this reason, small change arises in non - oil % GDP expenditure and non - oil % GDP production between 2017 and 2018. In terms of methods, given that BAS 2019 for exceptional circumstances was not carried-on, their data used for national accounts, it was estimated from a tax database.

² The 2008 SNA was prepared under the auspices of the Inter-Secretariat Working Group on National Accounts (ISWGNA), which consists of five organizations: The Statistical Office of the European Communities (Eurostat), the International Monetary Fund (IMF), the Organization for Economic Cooperation and Development (OECD), the United Nations Statistics Division and regional commissions of the United Nations and the World Bank. The 2008 SNA was published jointly by the five organizations.

Now, the oil is considered produced by resident enterprises (September 2019 onwards). The Oil-GDP is included given the new Timor-Leste Australia Maritime Boundary Treaty (August 2019). Before, the oil contribution to Timor - Leste economy was through royalties and included in GNI. For this reason, to compare the overall GDP between 2018 and 2019 is misleading. It is better to compare Non – Oil GDP or overall GNI between these years. 2019 is a transition year, until August the contribution of oil was through royalties, and between September – December was primarily in Oil – GDP.

Acknowledgements

The TL-NA 2000-2019 was produced under my direction within the General Directorate of Statistics, Ministry of Finance.

The national accounts follow-up compilation 2019 was implemented by a team comprising the National Accounts Adviser, Ramon Gerardo Aceituno Puga, and staff of the National Directorate of Economic and Social Statistics within the GDS-MoF, Rodolfo Soares (Head), Alzira Doutel, Sonia Smith Neto Fernandes, Armando Gaspar, Avelino Maria de Jesus Marçal, Marciana Urbano da Cruz and Laura de Jesus Moreira.

The National Directorate of Economic and Social Statistics (National Director Cristino Gusmão) contributed to the project. The National Directorate of Systems and Reports (Director Silvino Lopes and João Gusmão) assisted with the manuscript design.

The statistics are a comprehensive and valuable data source for policymaking, analysis, and research. The TL-NA statistics are compiled and published between nine to twelve months after the reference year to which they relate.

CONCLUSIONS

The non-oil GDP is showing a slight recovery (+1.8%) in 2019, after a decrease for two consecutive years, as shown in Graph 1. Now, the level of GDP in 2019 is almost the same as in 2015.

Graph 1: TL 2015-2019 Non-Oil GDP (Index 2015=100)

1. From the expenditure side, the GDP 2019 was favored by increased in consumption of public expenditures (+5.8%), private spending (+3.2%), and exports of goods (+2.8%). However, both public and private investment experienced a substantial decline (-19.8% and -0.9% respectively) for political uncertainty. The rise of the imports of goods (+6.3) has also slowed down the GDP growth.

The notable increase in consumption of public expenditures is explained by the rise in the purchases of goods and services (+23.1%). Besides, private spending also increased, determined by the private consumptions about (+3.5%). Exports of goods (+2.8%) again went up driven by other exports of goods (exclude coffee) which rose to (+28.5%). In addition, imports of merchandise goods (+6.3%) increase mainly in mineral products, vehicles and crops and vegetables.

The economy in 2019 was driven by consumptions (+5.8%). The continuity of the low level in investment will be likely to affect future economic growth.

2. From the production side, the same situation was confirmed by industries. The GDP at factor cost or Gross Value Added (GVA) also recorded positive growth (1.5%). It increases all industries covered by the Business Activity Survey (more private, formal industries restricted by demand, such as information and communications increased by 33.3%. Also, other industries not covered by the BAS (public administrations, informal limited by supply, such as agriculture also increased by 2.5%. As shown in Graph 2:

Graph 2: TL 2010-2019 Real GDP by Production Approach BAS and Non-BAS Industries (Index 2015=100)

All the leading industries in the production side increased, with some exceptions such as Constructions (-6.7% as a consequence of a decline in public and private investment), and Public Administrations (-6.0% impacted by an

increase in the purchase of goods and services, affects the intermediate consumption goes up exceeding output, therefore the value-added went down).

3. Given the slight recovery of the economy in 2019, what happened on the income side? In overall, it increased +5.7% in nominal terms. Specifically, as shown in graph three below, there was a minor increase in nominal Gross Mixed Income, commonly associated with the household income in subsistence agriculture (+3.6%) in line with the rise of agriculture value added (2.5%).

Compensations of employees rose to +6.9% driven by Non-profit Institutions Serving households (+16.6%) and general government (+0.9%).

The gross operating surplus increased (+7.2%), following the nominal GDP (+5.7%) and determined by the Non-financial and financial corporations as well (+9.4%).

Graph 3: TL 2010-2019 Nominal GDP by Income Approach (Index 2015=100)

SUMMARY

At constant prices (2015=100), in 2019, the Non-Oil GDP increased by 1.8%, following the GDP expenditure (e) approach, as the headline GDP (GDP=GDP (e)).

For the others, the Oil GDP for 2019 (September – December) in constant prices was \$264.6 million. Oil GDP is compiled by the National Accounts after the New Maritime Boundary Treaty signed on 30 August 2019. For this reason, it should make the comparison of overall GDP of 2018 with 2019 with caution.

- The Oil Output in 2019 was about \$494.9 million.
- The increase in non-oil GDP was based on general government consumption (5.8%) after experiencing a high decrease in 2017 (-6.9%) and a slight increase (1.0%) in 2018. Moreover, Consumptions of goods and services by the private sectors also increased by 3.5%. The exports of goods (2.8%) has been slowed down following the decrease in coffee exports. In contrast, imports of goods show a high increase of 6.3% after undergoing a significant reduction in 2018 around (-12.9%).
- In quarterly terms, the Non-Oil GDP (e), comparing the same quarters between 2018 and 2019, increased in Q2 (14.8%) then continued to grow sharply in Q3 (24.5%). Nevertheless, the GDP in the first and fourth quarters dropped to negative 14.1% and 10.3% respectively.
- From the supply side, the GDP (production approach), also increases by 1.5%. All the industries went up, except constructions (-6.7%) and public administrations (-6.0%) decreased compare to 2018.
- The Non-Oil GDP per capita increased by 5.2% in current terms and decrease to -0.2% in constant terms.

TIMOR-LESTE ECONOMY IN 2019

Table I OVERVIEW OF THE TIMOR-LESTE ECONOMY IN 2019: The macroeconomic aggregates. (Millions of USD)

	mUSD		Growth Rates (%)	
	2018	2019	2018	2019
(Current)				
Oil GDP pm		343.7		
Non-Oil GDPpm	1559.9	1674.2	-2.5	7.3
(Constant 2015=100)				
Oil GDP pm		264.6		
Non-Oil GDPpm	1563.8	1591.9	-1.1	1.8

Graph 4: Non-Oil Gross Domestic Product and Gross National Income at Current Prices, 2010 to 2019 (millions of US dollars)

KEY POINTS

- Total Gross Domestic Product (GDP) in *current prices* for Timor-Leste in 2019 was \$2,017.9 million. Of this:
 - The non-oil industry accounted for \$1,674.2 million.
 - The oil industry accounted for \$343.7 million.
- The Gross National Income (GNI) for Timor-Leste in 2019 was \$2,698.5 million. Of this Property Income contributed with \$811.1 million mainly Royalties and Taxes from Oil and Gas activities (\$ 543.9 million).
- The total GDP per capita in current prices was \$1,560.5 in 2019.
 - The oil sector provided \$265.8 million.
 - The non-oil sector contributed with \$1,294.7 million (\$1,230.2 in 2018).
- Also, the non-oil GDP per capita in 2019, at constant terms based on 2015 price, is almost the same as the level in 2011 (\$ 1231USD). In the last three years, it has completely offset all the increases achieved between 2011 and 2016.

Graph 5: TL 2011-2019 Non-Oil GDP per Capita (millions of USD)

- In *constant prices*, total GDP in 2019 increased to 18.7% (compared with 2018) of which:
 - The oil sector constituted for \$264.6 million, which was the first oil figures accounted in National Account, after the maritime boundary treaty.
 - The non-oil sector rose to 1.8% in 2019 compared with -1.1% in 2018. This upsurge was a result of the increased in general government consumption of goods and services (+5.8%), consumptions of private sectors (+3.5%), and exports of goods (2.8%). Imports of goods offset with (-6.3%) in constant terms.

The investments of the public, as well as private sectors, have dropped off (-19.8%, -0.9%) during 2019.

Graph 6: Key Expenditure Components of GDP, Constant Prices (2015=100), 2010 to 2019 (millions of US Dollars)

Graph 6 illustrates the evolution of some structural properties in the economy of Timor-Leste:

First, historically, the change in the non-oil GDP expenditure follows the changes in public spending (i.e. consumption and investment). However, in the last two years, it follows the growth in the private sector.

Second, the net exports (Exports of goods and services less Imports of goods and services) follow (with the opposite sign) the public sector expenditure, so there is a positive correlation between public investment and imports. Also, the effect of public investment was offset by imports (leaks), given the low demand for local production.

Third, there is a robust political cycle in public expenditure and development partners' expenditure, despite its negative trend. Also, they are correlated with some lag. A good example is 2012 and 2017.

Non-Oil GDP Components in 2019

Non-oil GDP in constant prices, by the expenditure approach, increased to 1.8% in 2019, compared with -1.1% in 2018.

Expenditure Approach. Annually

Table II shows the growth rates and the contributions to the growth of the expenditures from the public sector, the private sector, and development partners and from the external sectors.

Table II Macroeconomic Aggregates

	Growth Rates (%)		Contribution to Growth (pp)	
	2018	2019	2018	2019
Public Expenditure	7.1	-3.8	4.9	-2.8
Consumption	1.0	5.8	0.4	2.7
Investment	19.2	-19.8	4.4	-5.5
Development partners	-7.4	-8.8	-1.1	-1.2
Consumption	-6.7	-7.4	-0.8	-0.8
Investment	-11.1	-15.9	-0.3	-0.4
Private Expenditure	-4.9	3.2	-3.4	2.2
Consumption	2.0	3.5	1.3	2.2
Investment	-52.9	-0.9	-4.7	0.0
Exports	16.6	-17.2	0.3	-0.4
Goods	41.2	2.8	0.3	0.0
Services	3.7	-31.5	0.0	-0.4
Imports	2.8	-6.5	1.6	-3.8
Goods	-12.9	6.3	-4.4	1.9
Services	27.0	-20.0	6.0	-5.7
Change in Inventories	-11.9	16.0	-0.2	0.2
GDP Expenditure	-1.1	1.8	-1.1	1.8

In the first term, according to the *contributions to growth*, in percentage points (pp), they are growth rate in t (2019) over $t-1$ (2018), weighted by the participation of the item in the aggregated values in $t-1$ (2018) (see the *Glossary*). The sum of the contributions to growth in percentage points of each component (-2.8; -1.2; 2.2; -0.4; -3.8; 0.2) in 2019, is the same of the GDP growth rate in the year (1.8%). Also, it is true, for some specific component. For example, Public Consumption (2.7pp) plus Public Investment (-5.5pp) is the Public contribution (-2.8pp) to the GDP in 2019.

The overall consumption contributed to the GDP by 4.1 percentage points. The increase in public and private consumption (2.7+2.2) percentage points offset the fall in development partners' consumption in 0.8 percentage points.

However, the overall investments (-1.8) percentage points to the GDP mainly from the public sector (-5.5pp). The private investment has a zero percentage point contribution to

GDP in 2019; besides, development partners' investment also contributed -0.4 percentage points.

Individual movements in the items of the GDP, growth rates in constant prices, were as follows, by sectors:

PUBLIC SECTOR

Public sector expenditure decreased to -3.8% in 2019, of which public investment fall to -19.8%. It is due to the fall in the capital formation of fixed assets, such as building and structures (-24.1%). The consumption of the public sector increased by 5.8% and was driven by increased in the purchase of goods and services (23.1%).

DEVELOPMENT PARTNERS

Development Partners and Technical Assistance expenditure declined by -8.8% in 2019 (after experiencing a fall of -7.4% in 2018). It affects by both consumptions (-7.4%) and investments (-15.9%) declined.

PRIVATE SECTOR

The expenditure of the private sector in 2019 increased by 3.2%. In terms of consumptions, it rises by 3.5% in real terms through households which their final consumption expenditures go up by 3.8%. On the other side, it is declined (-0.9%) less in terms of investment.

CHANGE IN INVENTORIES

The Change in Inventories, in 2019, it shows a positive growth by 16%. In 2018, it experienced a decline of -11.9% (23 USD millions).

EXPORTS AND IMPORTS

The exports of goods and services declined by -17.2%. The significant contribution to the negative growth was from exports of services (-31.5%). The exports of goods rose slightly around to 2.8% in 2019 compared to 41.2% in 2018 mainly driven by declining in exports of coffee (-2.4%), and it was a consequence of coffee production which fall -6.0%.

Imports of goods and services in 2019 also declined around -6.5%. With services (-20%) accounted from the mash reduction in construction in Timor-Leste (-56.3%) due to the fallout in the infrastructures fund by -57.8%.

Expenditure Approach. Quarterly

The quarterly Non-Oil GDP (Non-Oil qGDPi), expenditure approach replicates the annual Non-Oil GDP at quarterly temporal frequency using-as possible-the same concepts, sources, and methods. However, it is an indicator since a yearly national account variable (for example, Private Consumption) is used as a benchmark, and being temporally disaggregated using quarterly indicators.

Table III shows the quarterly profile of the Non-Oil qGDPi (e) and its components, in terms of a contribution to the growth rate. If seasonality (SA) is removed through some procedures based on Auto-Regressions (AR) and Moving Averages (MA) techniques, it is possible to better analyze the movements of the economy in the short term.

**Table III 2019: Quarterly Non-Oil GDP (e)
Indicator (percentage point)³**

	Q1	Q2	Q3	Q4	2019
Private consumption	3.5	1.8	1.7	1.9	2.2
Private investment	-3.1	0.6	1.6	0.6	0.0
Development Partners	2.1	2.6	-9.4	-1.5	-1.2
Gen. Gov. Consumption	-7.2	15.2	13.5	-6.2	2.7
Public investment	-12.3	-1.3	9.2	-12.5	-5.5
Exp. goods & ss.	-0.2	-0.8	-0.5	-0.3	-0.4
Imp. goods & ss.	-2.7	3.7	-8.1	-7.6	-3.8
goods	4.6	0.7	0.6	1.9	1.9
Services	-7.2	3.0	-8.7	-9.5	-5.7
Change in Inventories	0.4	0.3	0.3	0.1	0.2
Acquisition l. disp. of val.	0.0	0.0	0.0	0.0	0.0
Non-Oil GDP (e)	-14.1	14.8	24.5	-10.3	1.8

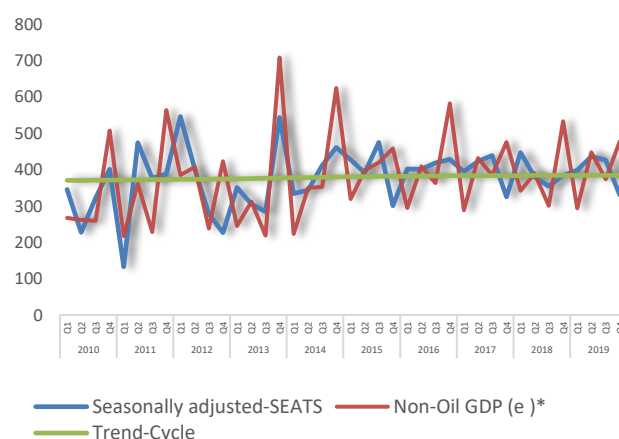

With the seasonal adjustment, it is possible to compare quarterly Non-Oil GDP growth rates, unlike in non-seasonally adjusted (NSA) series. Thus, it is possible to examine quarterly changes in the economy's direction, as shown in Graph 7.

The difference between the original series and the adjusted series is for seasonal factors⁴, and the adjusted series reflects the trend-cycle and the random elements. Provided that it identifies the seasonal factors inside the year, then the yearly growth rate (+1.8%) does not change. Only the quarterly percentage growth rate varies.

The quarterly data described the temporal profile of the macroeconomic events. After a fall in 2018, Non-Oil GDP had recovered to 1.8% in 2019. As per quarterly basis, the most contributed quarter to the annual Non-Oil GDP was the third quarter, which added 24.5 percentage point (pp) driven significantly by the General Government Consumption.

The second quarter, also led by the General Government Consumption, was the second

most contributor to the annual Non-Oil GDP growth by 14.8 PP.

**Graph 7: TL 2010-2019 quarterly Non-oil GDP indicator Seasonally Adjusted
(Millions of USD)**

The first (-14.1 pp) and last (-10.3 pp) quarters offset the rise in annual Non-Oil GDP. Public Investment contributed the most to the contraction, with -12.3 pp and -12.5 pp respectively.

Production Approach

The GDP (p) escalated to 1.5%, after experiencing a fall of -1.0% in 2018, according to the reviewed values.

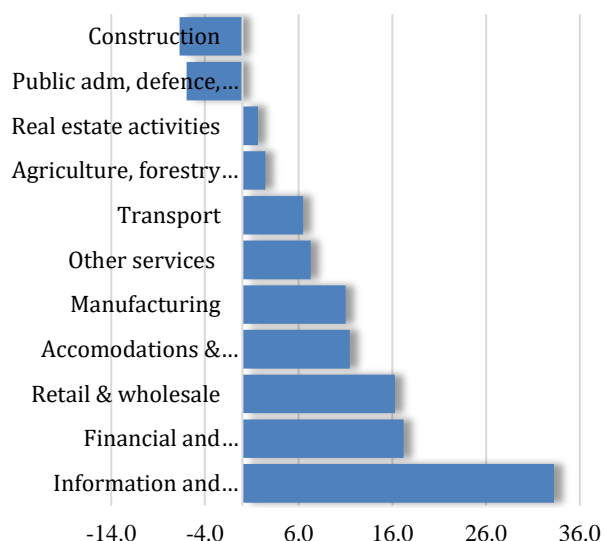

Graph 8 shows the value-added growth rates by industry in constant prices (2015=100) for 2019.

³ Given the non-linearity involved, the yearly growth rates are approximately the average of the quarterly growth rates. Better approximation, when the time series are monotonic, as private consumption. Bad

approximation when the time series are non-monotonic, as Non-Oil GDP (e).

⁴ Following a (0 0 0) x (0 1 1) [4] Seasonal ARIMA Model, selected by the lowest AIC.

**Graph 8: Growth Rates by Industries,
Constant Prices, 2019 (per cent)**

The growths of the valued added (output less intermediate consumption) for the leading industries in 2019 were:

- Agriculture, forestry and fishing (+2.5%). Supported by an increase in rice (38.8%), on the contrary maize declined (-9.5%), and also a slight decrease in coffee (-6.0%) after a massive increase (20%) in 2018.
- Constructions (-6.7%). A sharp decrease in public construction, given a decrease in public investment.
- Transport (+6.5%). Following the recovery in the economic activity.
- Retail and wholesale (+16.3%). In line with the increase in merchandise imports and consistent with an increase in consumption of private sectors (3.5%).
- Accommodations and Restaurants (+11.5%). By an effect of the increase in consumptions in 2019.
- Public Administration (-6.0%). The results of increasing in intermediate consumption (13.6%) more than output.
- Information and Communications (+33.3%). The result of the expansion of the telecommunications market to the municipalities in the previous year.
- Real Estate increased (+1.6%) following the population growth and imputed rents.
- Other Services (+7.3%). It was affected by the consumptions of both general government and private sectors.
- Financial and Insurance activities (+17.2%). The rise was driven by an increase in the number of micro-finance institutions, providing financial supports to households' economic activities.
- Manufacturing (+11.0%) also increased, mainly from high productions such as coffee processing and beverages industry.

GLOSSARY OF TERMS

Actual consumption

To allow because the consumption of goods and services by households may be paid for, in cash or kind by the general government sector, an alternative measure of consumption called actual consumption had been defined. It is measured by first separating government final consumption expenditure (GFCE) into individual and collective consumption. Individual consumption refers to services that are provided by the general government to households that are consumed individually, for example, health and education. Collective consumption relates to the provision of public services such as policing and defense. Household actual consumption is measured as household final consumption expenditure plus individual consumption within GFCE. General government actual consumption is calculated as GFCE less individual consumption. Actual consumption is a useful measure for international comparison since countries often have different systems for providing individual services.

Capital transfers

Transactions in which the ownership of an asset (other than cash and inventories) is transferred from one institutional unit to another, in which cash is transferred to enable the recipient to acquire another asset or in which the funds realized by the disposal of another asset are transferred.

Changes in inventories held by enterprises and general government

It is an estimate of the change in the book value of inventories held by enterprises and the government from the start of the reference year to the end of the year. In other terms, it is the value at the level of establishment and for an accounting period, of the additions fewer withdrawals to the stock of inventories of raw materials and finished products. The additions originate in production and imports and retreats for use as intermediate consumption and final demand.

Collective consumption

Services provided simultaneously to all members of the community or all members of a particular section of the community, such as all households living in a particular region. Collective services are automatically acquired and consumed by all members of the community, or group of households in question, with no action on their part. Typical examples are public administration and the provision of security, either at a national or local level. Collective services are the 'public goods' of economic theory. Collective services cannot be sold to individuals on the market, and they are financed by government units out of taxation or other incomes.

Compensation of employees

The total remuneration, in cash or kind, payable by an enterprise to an employee in return for work by the employee during the accounting period. It is further classified into two sub-components: wages and salaries; and employers' social contributions. Compensation of

employees is not payable regarding unpaid work undertaken voluntarily, including the work by members of a household within an unincorporated enterprise owned by the same household. Compensation of employees excludes any taxes payable by the employer on the wage and salary bill (e.g. payroll tax). See also Employers' social contributions; Wages and salaries.

Constant price measures

The current price *values* of production-based and expenditure-based gross domestic product estimates and their components can be conceived as the product of the underlying *quantities* of goods and services and their *prices*. Deflating the current price values by price indexes removes the effect of changing prices on the values. The resulting estimates are referred to as constant price estimates (or quantities, or volumes). Constant price estimates are calculated by applying the prices applying in a particular year (*the base year*) to all the years in the series. The Timor-Leste national accounts have adopted 2015 as the base year for its constant price series.

Consumption of fixed capital

The reduction in the value of fixed assets used in production during the accounting period resulting from physical deterioration, normal obsolescence or typical accidental damage. Unforeseen obsolescence, major catastrophes and the depletion of natural resources are not taken into account.

Contributions to Growth in GDP

A contribution to growth in GDP is the addition of some aggregate to GDP in percentage points. The sum of the percentage points, or contributions to the growth of all the aggregates, gives the rate of growth of the GDP. It is calculated as $\{(Ag_t - Ag_{t-1}) / GDP_{t-1}\} \times 100$. Where: Ag_t is the value of the aggregate in the year under consideration, Ag_{t-1} is the value of aggregate A in the previous year and GDP_{t-1} is the value of GDP in the previous year. Also, it can be interpreted as "incidence" of aggregate A, defined as the rate of growth of an aggregate, weighted by the share of the aggregate in the GDP in the previous year: $(Ag_t / Ag_{t-1} - 1) \times 100 \times (Ag_{t-1} / GDP_{t-1})$.

Current prices

Estimates are valued at the prices of the period to which the observation relates. For example, estimates for 2009 are valued using 2009 prices, in contrasts with constant price measures where the prices used in valuation refer to the prices of the base year. *See also constant price measures.*

Current transfers

Transfers, other than those classified as capital transfers, in which one institutional unit provides a good, service or cash to another unit without receiving from the latter anything of economic value.

Economically significant prices

Prices that have a significant influence on both the amounts producers are willing to supply and the amounts purchasers wish to buy.

Employers' social contributions

Payments by employers intended to secure for their employees the entitlement to social benefits should certain events occur, or specific circumstances exist, that may affect their employees' income or welfare - work-related accidents and retirement.

Exports of goods and services

The value of goods exported and amounts receivable from non-residents for the provision of non-factorial services by residents.

Final consumption expenditure - general government

Government final consumption expenditure is current expenditure by general government bodies on services to the community such as defense, education, and public order and safety less than any explicit charges for these services. If these are provided free or at charges which cover only a small proportion of costs, the government is considered being the consumer of its output. This output has no observable market value, and so it is valued in the national accounts at its cost of production. It also includes the value of the portion of market output purchased by the General Government sector on behalf of beneficiaries.

Final consumption expenditure - households

Net expenditure on goods and services by persons. This item excludes expenditures by unincorporated businesses and expenditures on assets by non-profit institutions (included in gross fixed capital formation). Also excluded is expenditure on maintenance of dwellings (treated as intermediate expenses of private enterprises), but personal expenditure on motorcycles and other durable goods and the imputed rent of owner-occupied dwellings are included. The value of 'backyard' production (including food produced and consumed on farms) is included in household final consumption expenditure and the payment of wages and salaries in kind (e.g. food and lodging supplied free to employees) is counted in both household income and household final consumption expenditure.

Final consumption expenditure - non-profit institutions serving households

Current expenditure by non-profit institutions on the provision of goods and services to households. This output has no observable market value and so is valued in the national accounts at its cost of production.

Fixed Assets

Are defined as produced assets that are used repeatedly, or continuously, in processes of production for over one year. Fixed assets include not only structures, machinery and equipment and intellectual property products but also cultivated assets such as trees and

animals that are used repeatedly or continuously to produce other products such as fruit and dairy products.

Gross domestic product, GDP, GDP (E), GDP (P), GDP (I)

In Timor-Leste, from 2010 onwards, the GDP is measured from the Production Approach (GDP (P)), Expenditure Approach (GDP (E)) and Income Approach (GDP (I)). Only the first two are true independent measures: The GDP (P) is the total market value of goods and services produced in Timor-Leste within a period after deducting the cost of goods and services used up in the process of production but before deducting allowances for the consumption of fixed capital. The GDP (E) is equivalent to gross national expenditure plus exports of goods and non-factorial services, less imports of goods and non-factorial services. In TL-NA the *headline* GDP is GDP (E).

From September 2019 onwards, the GDP also considers Oil-GDP under the three approaches, because given the New Maritime Boundary Treaty signed on August 30, 2019, the oil is a resident industry. Before, the oil contribution to the economy came from Royalties and Taxes, and was measured in the GNI. For this reason, and for a given item, the comparison between 2018 and 2019 should be considered with caution.

GDP per capita

The ratio of the current or constant price estimate of GDP to an estimate of the resident Timor-Leste population. Population estimates, according to the United Nations, Department of Economic and Social Affairs, Population Division. World Population Prospects, the 2019 Revision (<https://esa.un.org/unpd/wpp/>). It considers GDS Population Censuses (2004, 2010, and 2015) and well-known international parameters for worldwide comparison.

Gross fixed capital formation - general government

Expenditure on new fixed assets plus net expenditure on second-hand fixed assets, whether for additions or replacements. Expenditure on new road works (or upgrading existing roads) is included, but expenditure on road repair and maintenance is classified as government final consumption expenditure.

Gross fixed capital formation – private

Expenditure on fixed assets. Expenditure on repair and maintenance of fixed assets is excluded, being chargeable to the production account. Additions to fixed assets are capital formation. Also included is a compensation of employees and other costs paid by private enterprise in connection with its own-account capital formation. Expenditure on mineral and petroleum exploration is gross fixed capital formation.

Gross fixed capital formation - public corporations

Expenditure on new fixed assets plus net expenditure on second-hand fixed assets and including both additions and replacements. Also included is a compensation of employees and other costs paid by public corporations in connection with capital works undertaken on their account.

Gross mixed income of unincorporated enterprises

The surplus or deficit accruing from production by unincorporated enterprises. It includes elements of both compensations of employees (returns on labor inputs) and operating surplus (returns on capital inputs). Also included are estimates of the imputed income derived from subsistence agriculture and other informal production activities.

Gross national disposable income (GNDI)

Is equivalent to gross national income plus all secondary income in cash or kind receivable by resident institutional units from the rest of the world (i.e. remittances), less all secondary income in cash or kind payable by resident institutional units to the rest of the world.

Gross national expenditure

The total expenditure within a period by Timor-Leste residents on final goods and services (i.e. excluding goods and services used up during the period in the process of production). It is equivalent to gross domestic product plus imports of goods and services less exports of goods and services.

Gross national income (GNI)

The aggregate value of gross primary incomes for all institutional sectors, including net primary income receivable from non-residents.

Gross national savings

It is calculated as gross national disposable income, less final consumption expenditures of households, general government and non-profit institutions serving households. Gross national savings is the surplus generated in the reference year and available to finance investments, including in fixed capital formation.

Gross operating surplus

The operating surplus accruing to all enterprises, except unincorporated enterprises, from their operations in Timor-Leste. It is the excess of gross output over the sum of intermediate consumption, compensation of employees, and taxes less subsidies on production and imports. It is calculated before the deduction of consumption of fixed capital, dividends, interest, royalties and land rent, and direct taxes payable. Gross operating surplus is also estimated for the general government, and it equals the general government's consumption of fixed capital.

Gross value added

The value of output in Timor-Leste National Accounts at producer's prices, minus the value of intermediate consumption at purchaser's prices. The term is used to describe gross product by industry. It includes Compensation of employees, Taxes on products and others on production and imports, less subsidies on products and others on production, Gross Operating Surplus, and Gross Mixed Income.

Implicit price deflator

It is obtained by dividing a current price value by its real counterpart (the constant price measure). When calculated from the primary national accounting aggregates, such as gross domestic product, implicit price deflators relate to a broader range of goods and services in the economy than that represented by any of the individual price indexes such as the consumer price index.

Imports of goods and services

The value of goods imported and amounts payable to non-residents for the provision of non-factorial services to residents.

Individual consumption

An individual consumption of good or service is one that is acquired by a household and used to satisfy the needs and wants of members of that household. Individual goods and services can always be bought and sold on the market, although they may also be provided free, or at prices that are not significant, or as transfers in kind. Individual goods and services are 'private', as distinct from 'public'. *See also Collective consumption.*

Institutional unit

An institutional unit is an economic entity that is capable, in its own right, of owning assets, incurring liabilities, engaging in economic activities and engaging in transactions with other entities.

Intermediate consumption

Comprises the value of the goods and services used as inputs by a process of production, excluding compensation of employees and the consumption of fixed capital.

Inventories

Comprise stocks of outputs that are held at the end of a period by the units that produced them before they're being further processed, sold, delivered to other units or used in other ways and stocks of products acquired from other units used for intermediate consumption or resale without further processing.

Livestock

Livestock assets are classified as either fixed assets or inventories. That livestock used in the production of other products (e.g. breeding stock and dairy cattle) are fixed assets. Inventories cover all other livestock types and include those animals raised for meat or other one-off products (e.g. leather).

Market output

The output that is sold at prices that are economically significant or otherwise disposed of on the market, or intended for sale or disposal on the market.

Net secondary income from non-residents

All transfers to or from non-residents to resident government or private institutional units which are not payments for goods and services, compensation of employees or property income.

Non-market output

Goods and services produced by an institutional unit that are supplied free or at prices that are not economically significant.

Other subsidies on production

Comprise all subsidies, except subsidies on products, which resident enterprises may receive because of engaging in production. Other subsidies on production include subsidies related to the payroll or workforce numbers, including subsidies payable on the total wage or salary bill, on numbers employed, or on the employment of particular types of persons, e.g. persons with disabilities or persons who have been unemployed for a long period. The subsidies may also be intended to cover some or all of the costs of training schemes organized or financed by enterprises. Subsidies aimed at reducing pollution is also included. See also Subsidies on products.

Other taxes on production

It comprises all taxes that enterprises incur because of engaging in production, except taxes on products. Other taxes on production include taxes related to the payroll or workforce excluding compulsory social security contributions paid by employers and any taxes paid by the employees themselves out of their wages or salaries. Recurrent taxes on land, buildings or other structures; some business and professional licenses where no service is provided by the Government in return; taxes on the use of fixed assets or other activities; stamp duties; taxes on pollution; and taxes on international transactions.

Output

It comprises those goods and services that are produced within an establishment that become available for use outside that establishment, plus any products produced for own final use.

Primary incomes

Comprise incomes that accrue to institutional units because of their involvement in processes of production or their ownership of assets that may be needed for production.

Property income

Is the income receivable by the owner of a financial asset or a tangible non-produced asset in return for providing funds, or putting a tangible non-produced asset at the disposal of another institutional unit.

Purchasers' price

The amount paid by the purchaser, excluding any deductible tax, to take delivery of a unit of a good or service at the time and place required by the purchaser. The purchaser's price of a good includes any transport charges paid by the purchaser to take delivery at the required time and place.

Secondary income

Comprises receipt and payment of current transfers.

Social assistance benefits in cash to residents

Includes current transfers to persons from general government in return for which no services are rendered or goods supplied. Principal components include scholarships; maternity sickness and unemployment benefits; family allowances; and widows', age, invalid and repatriation pensions.

Statistical discrepancy, SD, SD (E) and SD (P)

Statistical discrepancy is the numerical difference obtained for the estimation of the same variable using different approaches, sources and methods. Applied to GDP, there are different approaches, GDP (E) or GDP (P) for example. In TL-NA 2000-2013, given that GDP (E) is the *headline* GDP, then the Statistical Discrepancy is $SD = SD (E) = GDP(E) - GDP(P)$.

Subsidies on products

Subsidies payable per unit of a good or service. The subsidy may be a specific amount of money per unit of a quantity of a good or service, or it may be calculated ad valorem as a specified percentage of the price per unit. A subsidy may also be calculated as the difference between a specified target price and the market price paid by a purchaser. A subsidy on a product becomes payable when the product is produced, sold or imported, but it may also become payable in other circumstances, such as when a product is exported, leased, transferred, delivered or used for own consumption or own capital formation.

Taxes less subsidies on production and imports

Defined as 'taxes on products' plus 'other taxes on production' less 'subsidies on products' less 'other subsidies on production'.

Taxes on production and imports

Comprise 'taxes on products' and 'other taxes on production'. These taxes do not include any taxes on the profits or other income received by an enterprise. They are payable irrespective of the profitability of the production process. They may be payable on the land, fixed assets or labor employed in the production process, or on specific activities or transactions.

Taxes on products

Taxes payable per unit of some good or service. The tax may be a specific amount of money per unit of a quantity of a good or service (quantity being measured either in terms of discrete units or continuous physical variables such as volume, weight, strength, distance, time). Or it may be calculated ad valorem as a specified percentage of the price per unit or value of the goods or services transacted. A tax on a product becomes payable when the product is produced, sold or imported. Still, it may also become payable in other circumstances, such as when a good is exported, leased, transferred, delivered, or used for own consumption or own capital formation.

Terms of trade

Calculated by dividing the export implicit price deflator by the import implicit price deflator and multiplying by 100.

Total factor income

That part of the cost of producing the gross domestic product that comprises gross payments to factors of production (labor and capital). It represents the value added by these factors in the process of production and is equivalent to gross domestic product less taxes plus subsidies on production and imports.

Wages and salaries

Comprise amounts payable in cash including the value of any social contributions, income taxes, fringe benefits tax, etc., payable by the employee even if they are withheld by the employer for administrative convenience or other reasons and paid to social insurance schemes, tax authorities, etc., on behalf of the employee. Wages and salaries may be paid as remuneration in kind instead of, or beside, compensation in cash. Separation, termination and redundancy payments are also included in wages and salaries. Wages and salaries are also measured as far as possible on an accrual rather than a strictly cash basis. See also Employers' social contributions; Compensation of employees.
