FOREWORD

The *Timor-Leste's National Accounts for 2001-2020 (TL-NA 2001-2020)* presents a comprehensive and consistent set of macroeconomic accounts that are useful for economic analysis to support the development and monitoring of policy-making. It is comprehensive because it covers all designated activities and their consequences for agents in the economy. It is consistent because identical values are used to establish the consequences of a certain action on all parties concerned using similar accounting rules. In the website of the General Directorate of Statistics of the Ministry of Finance can be found methodological notes on the concepts, classifications, methods, and sources used in the TL-NA, which can be accessed at www.statistics.gov.tl¹

TL-NA 2001-2020 is the fifth *follow-up compilation* after the second *benchmark compilation* since the Restoration of Independence of Timor-Leste, and it takes 2015 as the base year (2015=100) for the measure at constant prices. The first *TL-NA 2010* established 2010 as the base year. The objective of *benchmark compilation* is to get the *best level* of the gross domestic product (GDP), which is the most frequently quoted indicator of economic performance. A follow-up compilation, such as the present *TL-NA 2001-2020*, measures the *best change* in the GDP from 2015 and all the other macro aggregates related to it.

The *Timor-Leste's National Accounts* have been produced by the General Directorate of the Ministry of Finance under the supervision of a dedicated and talented Director-General, Elias dos Santos Ferreira, with the support of an experienced and competent National Accounts Advisor, Ramon G. A. Puga.

The statistics in the *TL-NA 2001-2020* are based on the economic activity data collected through censuses and surveys, namely the *Business Activity Surveys*, *Government's Incomes and Expenditures*, *External Trade Statistics*, the *Consumer Price Index* reports and other sources.

The compilation of all economic activity data follows the United Nations *System of National Accounts 2008* (2008SNA), a system that consists of the internationally agreed standard set of recommendations on how to compile measures of economic activity in accordance with strict accounting conventions based on economic principles. Specifically focusing the economy "... less on income and more on the processes of production and consumption. Where do products come from and how are they used?" (2008 SNA, paragraph 14.1) The present publication considers an integrated set of accounts, including estimates of GDP, reconciled using three consistent approaches – production, expenditure, and income. The reconciliation process is made -separately for the oil and non-oil economy.

It further extends the GDP estimates to Gross National Income (GNI), Gross National Disposable Income (GNDI) and Gross Saving. All compiled under the concepts and definitions of the 2008 SNA.

I want to express my appreciation to the General Directorate of Statistics, Ministry of Finance, for the successful implementation of the project and to the many individuals who contributed to this work.

Rui Augusto Gomes
Minister of Finance

¹ Timor-Leste National Accounts 2004-2010, Volume II, Methodological notes on the concepts, methods, National Directorate of Statistics, May 2012, available online at: http://www.statistics.gov.tl/wp-content/uploads/2013/11/TIMOR-LESTE_NATIONAL_ACCOUNTS_2004-2010_VOLUME_II.pdf

PREFACE

The publication of *Timor-Leste's National Accounts for 2001-2020* (TL-NA 2001-2020) represents a significant further step by the General Directorate of Statistics (GDS) under the Ministry of Finance in the production, analysis, and dissemination of key economic statistics of Timor-Leste.

The publication comprises this printed publication that contains all the statistics and a summary of the data, and an online version accessible at www.statistics.gov.tl. The Statistics website also includes extra information about the concepts, classifications, sources and methods that underpin the compilation of Timor-Leste's national accounts.

This publication contains estimates of Gross Domestic Product (GDP), Gross National Income (GNI), Gross National Disposable Income (GNDI), and Gross Saving to give a complete picture of the relationship between product, income and saving aggregates for Timor-Leste. In addition, the TL-NA includes a stylized version of the *quarterly indicator for Non-Oil GDP by expenditure approach* (Non-Oil qiGDPe) from 2010 onwards.

All the estimates have been calculated by the most current international standards and classifications for compiling macroeconomic accounts. These are the *System of National Accounts 2008 (SNA 2008)*² and the sixth edition of the *Balance of Payments and International Investment Position Manual (BPM6)*, International Monetary Fund (IMF).

The *headline* GDP for TL-NA 2001-2020 in constant terms is the GDP expenditure because it uses higher quality price data sets to get results in constant terms.

Regarding the revision policy of the Timor-Leste National Accounts, TL-NA 2001-2019 includes updated primary sources. The significant changes in the underlying sources are updated international prices following the World Economic Outlook from IMF and updated compilations for agriculture production from FAO. For this reason, minor change arises in GDP expenditure in 2018 and 2019, originally -1.1% and +1.8% for the non-oil GDP, and now, updated is -0.7% and +2.1%.

For TL-NA 2020, there are some adjustments to methods. Because BAS 2020 was not carried on for exceptional circumstances, their national accounts data were estimated from a tax database. Also, the indicators for private consumption, at the product level, were affected by Covid-19. It explains why the private consumptions time series 2001-2020 was not breakdown as usual. Therefore, the estimations for the private sector, expenditure and production, can be preliminary, and they will review in the next future.

² The 2008 SNA was prepared under the auspices of the Inter-Secretariat Working Group on National Accounts (ISWGNA), which consists of five organizations: The Statistical Office of the European Communities (Eurostat), the International Monetary Fund (IMF), the Organization for Economic Cooperation and Development (OECD), the United Nations Statistics Division and regional commissions of the United Nations and the World Bank. The 2008 SNA was published jointly by the five organizations.

It is necessary to remember that from September 2019 onwards, resident enterprises produce the oil. The Oil-GDP is included, given the new Timor-Leste Australia Maritime Boundary Treaty (August 2019). Before, the oil contribution to Timor - Leste economy was through royalties and included in GNI. For this reason,

- To compare the overall GDP between 2018 and 2019 is misleading. It is better to compare non-oil GDP or overall GNI between these years. 2019 is a transition year until August, the contribution of oil was through royalties and between September-December was primarily in oil-GDP.
- Also, the comparison between 2019 and 2020 need to be made with care because it is comparing four months of oil production in 2019 with twelve months of oil production in 2020.

Acknowledgements

The TL-NA 2001-2020 was produced under my direction within the General Directorate of Statistics, Ministry of Finance.

The national accounts follow-up compilation 2020 was implemented by a team of National Directorate of Economic and Social Statistics (NDESS) in the Department of National Account and Balance of Payment (DNABP) comprising the staffs of the DNABP within the NDESS-GDS-MoF, Rodolfo Soares (Head of Department), Alzira Doutel, Sonia Smith Fernandes, Armando Gaspar, Avelino Maria de Jesus Marçal, Marciana Urbano da Cruz, Octaviana Maria de Fatima Sores Lemos, Martinho Celcios Yeros, Domingos Antonio Da Costa Freitas, and with the support of Ramon Gerardo Aceituno Puga, the National Accounts Advisor.

The National Directorate of Economic and Social Statistics (National Director Cristino Gusmão) contributed to the project. The National Directorate of Systems and Reports (National Director Silvino Lopes) and João Gusmão assisted with the manuscript design.

The statistics is a comprehensive and valuable data source for policymaking, analysis, and research. According to the international standards, the TL-NA statistics are compiled and published -for the first time- nine months after the reference year to which they relate.

CONCLUSIONS

The Non-Oil GDP declined significantly (-8.6%) in 2020, after a slight recovery from the previous year. As a result, in 2020, the level of GDP, as shown in Graph 1, dropped to almost the same level as in 2013.

Graph 1: TL 2013-2020 Non-Oil GDP (Index 2015=100)

1. From the expenditure side, the contraction of Non-Oil GDP of 2020 was mainly driven by a decrease in public investment (-49.9%). Export of goods and services (-51.1%), expenditure of development partners (-4.5%), and private spending (-3.3%) also contributed to the decline of the Non-Oil GDP. Public consumption was the only component that grew by 6.2% in 2020. This growth was mainly because of spending significant money on Covid-19 public management (other than transfers). A drop in the non-oil imports of Goods and services (-8.5%) provided a cushion for the Non-Oil GDP during the global pandemic of Covid-19.

A substantial drop in the investment of public expenditures resulted from a slowdown of the capital and development because the duodecimo regime was used for almost ten months. Private expenditure contracted, which is led by both private investment and consumption. Total non-oil exports decreased, driven by the exports of services (-61.3%) and

exports of goods (-41.6%) because of a significant drop in the export of coffee.

The Covid-19 crisis has resulted in a decrease in supply and demand simultaneously, which subsequently led Timor-Leste's non-oil economic growth to a historical trough. The non-oil economy has dropped back to seven years ago. In addition, the public and private investments that had dropped in the previous year have been exacerbated during the pandemic. The negative trend of investment will undermine the sustainability of the domestic economy in the future.

2. The Non-Oil GDP by production approach (Non-Oil GDPp) also confirmed the economic contraction by industries. The real Non-Oil GDP at factor cost or Gross Value Added (GVA) declined strikingly (-8.3%), resulting from a decrease in almost all industries usually surveyed in the Business Activity Survey (BAS) (more private and formal industries restricted by demand), except the information and communications increasing 11.0%. However, other industries not covered by the BAS (public administrations and informal limited by supply, such as agriculture) offset the negative growth, as shown in Graph 2.

Graph 2: TL 2010-2020 Real GDP by Production Approach BAS and Non-BAS Industries (Index 2015=100)

Construction went down to -31.0% caused by a steep fall in the public infrastructures. There was also a significant decline in accommodation and restaurant (-31.6%) and transportation industries (-26.3%). These industries have mainly been affected by the restrictions imposed on the international and domestic movement, forcing people to stay at home because of the Covid-19.

3. Provided that the Non-Oil GDP dropped substantially in 2020, how is the change of the Non-Oil GDP by income approach? Overall, it, at current terms, plunged to -8.0%.

As shown in Graph 3, the drop is driven by the non-oil gross operating surplus (-12.6%) owing to a significant decrease in both non-oil private corporations and public corporations (-24.5% and -37.4%, respectively). The non-oil compensation of employees (-7.7%) also fell, led by the compensation of employees of a non-oil private corporations (-16.8%) and general government (-0.4%). On the other hand, the non-oil gross mixed income rose 1.3% resulted from the household's gross mixed income generated through subsistence agriculture by 2.7%.

Graph 3: TL 2010-2020 Non-Oil GDP by the income approach, in current term (Index 2015=100)

SUMMARY

The Non-Oil GDP (at constant prices, 2015=100) in 2020 contracted by 8.6%, following a slight growth in 2019. The Non-Oil GDP by expenditure (Non-Oil GDP_e) approach is used as the headline GDP.

The Oil GDP for 2020 in constant prices was \$612.7 million. The National Accounts compile the oil GDP after the New Maritime Boundary Treaty was signed on 30 August 2019. For this reason, it should make the comparison of the overall GDP of 2019 with 2020 with caution.

- The Oil Output in 2020 was around \$1,606.5 million.
- A considerable decrease in the Non-Oil GDP was led by a significant plummet in government gross fixed capital formation (-49.9%), which also fell in the year 2017 (-25.6%) and 2019 (-19.8%). Consumption and investment of development partners and private sectors declined (-4.5% and -3.3% each). The exports of goods and services were also down (-51.1%) because of a decrease in coffee and other exports with 46% and 33% respectively. On the other hand, the general government consumption grew by 6.2%, significantly driven by an enormous amount of money allocated for Covid-19 public administration, other than direct transfers to households and businesses.
- Comparing the same quarter of the quarterly indicator for Non-Oil GDP by expenditure approach (Non-Oil qiGDP_e) between 2019 and 2020, there was a dramatic decrease in the Non-Oil GDP_e in the first three quarters with -26.6%, -23.2% and -25.9%, respectively. However, the Non-Oil qiGDP_e rebounded in the last quarter of the year to 29.1%.
- From the supply side, the Non-Oil GDP_p, at factor cost, also contracted by 8.3%. All the

significant industries fell except the information and communication; agriculture, forestry and fishing; and public administration, increasing to 11.0%, 5.1% and 0.4%, respectively.

- The Non-Oil GDP per capita decreased by 8.2% at current terms and 10.3% at constant terms.

TIMOR-LESTE ECONOMY IN 2020

Table I. OVERVIEW OF THE TIMOR-LESTE ECONOMY IN 2020: The macroeconomic aggregates (Millions of USD)

	mUSD		Growth Rates (%)	
	2019	2020	2019	2020
(Current)				
Oil GDP pm	343.7	306.7		
Non-Oil GDPpm	1704.2	1595.5	7.6%	-6.4%
(Constant 2015=100)				
Oil GDP pm	277.1	612.7		
Non-Oil GDPpm	1619.6	1480.8	2.1%	-8.6%

Graph 4: Non-Oil Gross Domestic Product and Gross National Income at Current Prices, 2014 to 2020 (millions of US dollars)

KEY POINTS

- The total Gross Domestic Product (GDP) in *current prices* for Timor-Leste in 2020 was \$1,902.2 million, which comprises
 - The non-oil industry made up \$1,595.5 million.
 - The oil industry accounted for \$306.7 million.
- The Non-Oil Gross National Income (GNI) for Timor-Leste in 2020 was \$2,401.1 million, reducing from \$2458.5 million in 2019
- The total GDP per capita in current prices was \$1,442.7 in 2020
 - The oil sector provided \$232.6.
 - The non-oil sector made up \$1,210.1 dropping from \$1,317.9 in 2019.
- In addition, the Non-Oil GDP per capita in 2020, at constant terms based on 2015 price, was \$1,123.1, falling to just below the 2010-level of \$1,185.6. The political uncertainties in the last four years, twined with the latest Covid-19 pandemic, have pushed the economy back to just under the level of a decade ago.

Graph 5: TL 2010-2020 Non-Oil GDP per Capita (US\$)

- Total GDP, at *constant prices*, rose by 10.4% (compared with 2019) of which:

- Since the maritime boundary treaty, the oil GDP made up \$612.7 million, which covered 2020 figures accounted in National Account.
- The non-oil GDP contracted by 8.6% in 2020 compared to a slight rise of 2.1% in 2019.

Graph 6: Key Expenditure Components of GDP, Constant Prices (2015=100), 2010 to 2020 (millions of US Dollars)

Graph 6 demonstrates the evolution of some structural properties in the economy of Timor-Leste:

First, historically, the change in the non-oil GDP expenditure follows the changes in public spending (i.e. consumption and investment) except in 2018 and 2019. It can be seen the two components move in the same direction for the year 2020.

Second, the net exports (Exports of goods and services less Imports of goods and services) follow (with the opposite sign) the public sector expenditure, so there is a positive correlation between public investment and imports. In addition, the effect of public investment was offset by imports (leaks) because of the lack of local production.

Third, despite its negative trend, there is a robust political cycle in public expenditure and development partners' expenditure. They are also correlated with some lag. A good example is 2012 and 2017.

Non-Oil GDP Components in 2020

Non-oil GDP by expenditure approach, in constant prices, contracted by 8.6% 2020, compared to a slight recovery of +2.1% in 2019.

Expenditure Approach. Annually

The following table displays the growth rates and contributions to the growth from the public sector, private sector, development partners, and external sectors.

Table II Macroeconomic Aggregates

	Growth Rates (%)		Contribution to Growth (pp)	
	2019	2020	2019	2020
Public Expenditure	-3.8	-11.4	-2.8	-7.8
Consumption	5.8	6.2	2.7	2.9
Investment	-19.8	-49.9	-5.4	-10.8
Development partners	-8.8	-4.5	-1.2	-0.5
Consumption	-7.4	-3.5	-0.8	-0.4
Investment	-15.9	-9.9	-0.4	-0.2
Private Expenditure	3.3	-3.3	2.2	-2.2
Consumption	3.7	-2.4	2.3	-1.5
Investment	-2.6	-17.1	-0.1	-0.7
Exports	-17.2	-51.1	-0.4	-1.0
Goods	2.8	-41.6	0.0	-0.4
Services	-31.5	-61.3	-0.4	-0.6
Imports	-6.5	-8.5	-3.8	-4.5
Goods	6.5	-1.7	1.9	-0.5
Services	-20.2	-18.1	-5.7	-4.0
Change in Inventories	16.9	-45.2	0.5	-1.5
GDP Expenditure	2.1	-8.6	2.1	-8.6

In the first term, according to the *contributions to growth*, in percentage points (pp), which are growth rate in t (2020) over $t-1$ (2019), weighted by the participation of the items in

the aggregated values in $t-1$ (2019) (see the *Glossary*). The sum of the contributions to growth of each major component (-7.8 pp; -0.5 pp; -2.2 pp; -1.0 pp; -4.5 pp; -1.5 pp) in 2020 equals to growth of Non-Oil GDP 2020. It is also applied to some specific components. For example, contribution to the growth of exports of goods and services (-1.0 pp), comprises export of goods and export of services with -0.4 pp and -0.6 pp respectively for the year 2020.

The overall investments accounted for -11.7 pp to the GDP growth, resulted mainly from the public investment with -10.8 pp, private investment -0.7 pp and development partners' investment -0.2 pp.

The overall consumption is offset by 1 pp to the Non-Oil GDP, essentially made up by the public consumption with 2.9 pp, while consumption of private and development partners is offset with -1.5 pp and -0.4 pp each.

Individual movements of the Non-Oil GDP components, growth rates in constant prices, are as follows:

PUBLIC EXPENDITURES

Public expenditures (-11.4%) drove the negative growth, contributing -7.8 pp. The public investment was the key driver (-49.9%), making up -10.8 pp because of a drop in the capital formation of fixed assets, such as other structures of capital and development (-47.5%). In addition, the duodecimo regime was used for almost ten months, which deprived the public expenditures, especially investment. However, public consumption increased (+6.2%), driven by a rise in the purchase of goods and services (+9.6%) and compensation of employees (+1.6%).

DEVELOPMENT PARTNERS

Development partners and technical assistance expenditure (-4.5%) dropped, following a fall in the previous year (-8.8%). The drop in this year was led by both consumptions (-3.5%) and investments (-9.9%).

PRIVATE SECTOR

The private expenditures (-3.3%) decreased in 2020 compared to an increase in the previous year. Private consumption accounted for -2.4% because of a fall in household final consumption expenditure, despite the big transfers through Covid-19 management. In addition, private investment also continued the downward trend in the last three years with -17.1% in 2020.

CHANGE IN INVENTORIES

The change in inventories (-45.2%) declined substantially in 2020 after experiencing a moderate rise of 16.9% in 2019.

EXPORTS AND IMPORTS

The exports of goods and services (-51.1%) continued to drop sharply because there was a significant fall in both exports of services and export of goods with -61.3% and -41.6% respectively, given the Covid-19 restrictions on the international borders and the lockdown in each of the trade partners.

The imports of goods and services (-8.5%) went down with the imports of services -18.1% and imports of goods -1.7%. The drop in

imports of services was in line with the substantial plummet of public investments.

Expenditure Approach. Quarterly.

The quarterly indicator for Non-Oil GDP by expenditure approach (Non-Oil qiGDPe) replicates the annual Non-Oil GDP at quarterly temporal frequency using the same national account identity, namely the same concepts, sources, and methods. However, it is an indicator since the annual national account components (for example, Private and public expenditures) are used as a benchmark and temporally disaggregated using quarterly indicators.

Table III shows the quarterly profile of the Non-Oil qiGDPe and its components in terms of a contribution to growth in percentage points. Suppose seasonality (SA) is removed through some procedures based on Auto-Regressions (AR) and Moving Averages (MA) techniques. In that case, it is possible to better analyze the movements of the economy in the short term.

**Table III 2020: Non-Oil qiGDPe
(Percentage point) ³**

	Q1	Q2	Q3	Q4	2020
Private consumption	-3.0	-4.4	0.8	0.2	-1.5
Private investment	0.7	-1.5	-1.1	-0.5	-0.7
Development Partners	-5.1	2.3	-2.1	1.1	-0.5
Gen. Gov. Consumption	-6.7	-16.6	-10.6	36.7	2.9
Public investment	-8.1	-8.2	-4.9	-19.3	-10.8
Exp. goods & ss.	-0.6	-1.2	-1.4	-0.7	-1.0
Imp. goods & ss.	2.3	-7.9	4.7	-12.8	-4.5
Goods	1.6	-5.1	3.7	-0.9	-0.5
Services	0.7	-2.7	1.1	-11.9	-4.0
Change in Inventories	-1.5	-1.5	-1.9	-1.2	-1.5
A less disp. of valuables	0.0	0.0	0.0	0.0	0.0
Non-Oil GDPe	-26.6	-23.2	-25.9	29.1	-8.6

³ Given the non-linearity involved, the yearly growth rates are approximately the average of the quarterly growth rates. Better approximation, when the time

series are monotonic, as private consumption. Bad approximation when the time series are non-monotonic, as Non-Oil GDP (e).

It is possible to compare quarterly Non-Oil GDP growth rates with the seasonal adjustment, unlike in the non-seasonally adjusted (NSA) series. Therefore, there is a possibility to examine quarterly changes in the economy's direction, as shown in Graph 7.

The difference between the original series and the adjusted series is for seasonal factors⁴, and the adjusted series reflects the trend-cycle and the random elements. If it identifies the seasonal factors inside the year, only the quarterly percentage growth rate varies while the annual growth rate remains unchanged.

The quarterly data described the temporal profile of the macroeconomic events. The annual Non-Oil GDP dropped significantly in 2020, following a slight recovery in 2019. The economy was most affected in the first half of 2020, with the first quarter and second quarter at -26.6 pp and -23.2 pp respectively, because of the twin shocks of government instability and Covid-19 pandemic. The political instability impeded the government's state budget of 2020 from approval by the national parliament, leading the government to function without the state budget during the most critical situation of the nation until October 2020. As a result, the duodecimo regime was implemented for almost ten months, leading to low government expenditures, particularly investment. The existing economic challenges were exacerbated by containment measures of the Covid-19 pandemic carried out by the government. A state of emergency followed by a stringent lockdown was introduced starting at the end of the first quarter. The first covid-

19 case was identified in Timor-Leste, continuing until the end of the second quarter.

The robust effect of the crisis on the economy went on until the third quarter with -25.9 pp. The public sector, which is historically the primary driver of other sectors, was primarily affected throughout the period. Public investment contributed the most with -8.1 pp in the first three months and the general government consumption in the following two quarters with -16.6 pp and -10.6 pp respectively.

**Graph 7: TL 2010-2020 Non-oil qiGDPe
Seasonally Adjusted
(Millions of USD)**

However, the late approval of the annual budget and robust economic recovery program following the ease of containment measures of the pandemic in the last quarter led the economy to a significant rebound in that period with 29.1 pp.

⁴ Following a $(0\ 0\ 0) \times (0\ 1\ 1)$ [4] Seasonal ARIMA Model, selected by the lowest AIC.

Production Approach

The Non-Oil GDPp, at factor cost, fell 8.3%, following a modest rise of 2.0% in 2019.

Graph 8 shows the value-added growth rates by industry in constant prices (2015=100) for 2020.

Graph 8: Growth Rates by Industries, Constant Prices, 2020 (per cent)

Followings are the growths of the valued added (output less intermediate consumption) for the leading industries in 2020:

- Accommodation and Restaurant (-31.6%) dropped. This industry was mainly affected by the Covid-19 measures, limiting the movement of both domestic and international visitors.
- Construction (-31.0%) dropped, resulted from a sharp fall in public construction owing to a steep drop in public investment.
- Other Services (-29.4%) dropped drastically because of a decrease in private both the public and private sectors.

- Transport (-26.3%) was mainly affected by the government policies of Covid-19 mitigation, which broke the regular operation of the transport industry.
- Financial and Insurance activities (-20.2%) decreased. It was affected by an overall drop in 2020 compared to the previous year, with a significant rise.
- Manufacturing (-11.9%) decreased after a significant rise of 39.8% in the previous year.
- Retail and wholesale (-9.8%). This fall is consistent with the fall of private consumption.
- Real Estate fell slightly (-0.9%) following the overall economic situation, leading to a fall in real estate activities, particularly the actual rent to businesses.
- Public Administration (+0.4%) rose slightly, mainly because of increased public employment-related with the Covid-19 pandemic.
- Agriculture, forestry and fishing (+5.1%) offset other significant industries. It was mainly driven by production of cereals like maize (+30.0%) after a moderate drop of 7.2% in 2019. In contrast, the production of rice plummeted by -10.4%, following a substantial increase of 42.4%.
- Information and Communication (+11.0%). Following the growth of the previous year, the rise was mainly driven by an expansion of telecommunication services across municipalities in recent periods. This growth is consistent with the increasing demand for the services in the period of the Covid-19 pandemic.

The forecasted Non-Oil GDPe⁵ 2021, at constant term, is estimated to recover by 1.9%.

A robust rebound of investment will lead the economy back to positive growth after a substantial drop in 2020 because of the combined effects of political instability and the Covid-19 crisis, as shown in Table IV. The success of vaccinating eligible people will cause more relaxed Covid-19 containment measures at the end of the year, subsequently encouraging improved economic activities, particularly private and public investments.

Despite the devastating flood in the second quarter of 2020, private consumption will rise by 2.1% given the increased support from the government through the economic recovery plan, such as a basic basket of foods (cesta basica) and Covid-19 vaccines. In addition, the resumption of private economic activities might drive private consumption in the second half of the year. Public consumption will also increase, driven by both consumptions of goods and services and salary and wages. Covid-19 public administration⁶ is deemed to continue to influence the rise.

Development partners' expenditures will rise by 4.6% because of an improvement in consumption of development partners (DP).

Exports of goods and services will be likely to remain negative because of the covid-19 related border restriction. However, imports of goods and services are going to be significant upsurge owing to the considerable rise of investments, especially the public investment.

Table IV: Non-Oil GDPe Forecast version (growth rate and contribution to growth)

Timor-Leste Gross Domestic Product (GDP) 2021	Annual (%)	Cont. to growth (pp)
Private consumption	2.1	1.4
Private investment	12.2	0.4
Development Partners	4.6	0.6
General Government FCE	4.0	2.2
Public investment	25.1	3.0
Exports of goods and services	-11.9	-0.1
Exports of goods	-6.4	0.0
Exports of services	-20.8	-0.1
Imports of goods and services	10.7	5.7
Imports of goods	11.1	3.7
Imports of services	9.9	2.0
Change in inventories	1.7	0.0
Acquisition less disposals of valuations	0.0	0.0
Non-Oil GDPe	1.9	1.9

DISCLAIMER: This is the **forecast version** of Non-Oil GDPe 2021, is published in September 2021, based on the latest available information about Timor-Leste's expenditure indicators to provide timely information Timor-Leste's economic growth. The **preliminary version**, to be released in April 2022, will be more accurate because it will include more data from the second half of 2021, meaning there could differ slightly from this version. The **final version** for Non-Oil GDPe 2021 covering more complete data, including Oil and GDP production, will be published in September/October 2022.

⁵ Based on data, assumptions and National Account Identities, updated regularly according to the latest available indicators

⁶ This concept excludes transfers to households. Transfers from the government, and remittances from abroad are indirectly considered in Private Consumption

Consumer Price Index (CPI), annual average	12.6	11.7	10.7	0.8	0.6	-1.3	0.6	2.4	1.0	0.5
of which Dili	13.5	11.8	11.2	0.5	0.4	-1.6	0.6	2.6	1.2	0.6
Timor-Leste excluding Dili	12.4	11.7	9.4	2.3	1.3	-0.5	0.2	0.9	0.9	-0.4

*) United Nations, Department of Economic and Social Affairs, Population Division. World Population Prospects, the 2019 Revision (<https://esa.un.org/unpd/wpp/>).

It considers Timor-Leste Population Censuses as benchmark and yearly international well-known parameters for worldwide comparison.

**) The Price Index of the total (Oil Sector plus Non-Oil Sector) for 2019, includes Oil Sector from September 2019 onwards. So the comparison with 2018 should be done

***) the comparison between 2019 and 2020 need to be made with care, because it is comparing four months of oil production in 2019 with twelve months of oil production in 2020.

n/a) The percentage change of the Oil Sector is not applicable for 2019 because it is a resident industry from September 2019 onwards, according to the New Maritime Boundary Treaty signed on August, 30. 2019.

n/a) The contribution to growth of the Oil Sector is not applicable for 2019 because it is a resident industry from September 2019 onwards, according to the New Maritime Boundary Treaty signed on August, 30. 2019.

**) The contributions to growth of the total (Oil Sector plus Non-Oil Sector) for 2019, includes Oil Sector from September 2019 onwards. So the comparison with 2018 should be done with caution.

GLOSSARY OF TERMS

Actual consumption

To allow because the consumption of goods and services by households may be paid for, in cash or in kind by the general government sector, an alternative measure of consumption called actual consumption had been defined. It is measured by first separating government's final consumption expenditure (GFCE) into individual and collective consumption. Individual consumption refers to services that are provided by the general government to households that are consumed individually, for example, health and education. Collective consumption relates to the provision of public services, such as policing and defense. Household actual consumption is measured as household final consumption expenditure plus individual consumption within GFCE. General government actual consumption is calculated as GFCE less individual consumption. Actual consumption is a useful measure for international comparison, since countries often have different systems for providing individual services.

Capital transfers

Transactions in which the ownership of an asset (other than cash and inventories) is transferred from one institutional unit to another, in which cash is transferred to enable the recipient to acquire another asset or in which the funds realized by the disposal of another asset are transferred.

Changes in inventories held by enterprises and general government

It is an estimate of the change in the book value of inventories held by enterprises and the government from the start of the reference year to the end of the year. In other terms, it is the value at the level of establishment and for an accounting period, of the additions fewer withdrawals to the stock of inventories of raw materials and finished products. The additions originate in production and imports and retreats for use as intermediate consumption and final demand.

Collective consumption

Services provided simultaneously to all members of the community or all members of a particular section of the community, such as all households living in a particular region. Collective services are automatically acquired and consumed by all members of the community, or group of households in question, with no action on their part. Typical examples are public administration and the provision of security, either at a national or local level. Collective services are the 'public goods' of economic theory. Collective services cannot be sold to individuals on the market, and they are financed by government units out of taxation or other incomes.

Compensation of employees

The total remuneration, in cash or kind, payable by an enterprise to an employee in return for work by the employee during the accounting period. It is further classified into two sub-components: wages and salaries; and employers' social contributions. Compensation of

employees is not payable regarding unpaid work undertaken voluntarily, including the work by members of a household within an unincorporated enterprise owned by the same household. Compensation of employees excludes any taxes payable by the employer on the wage and salary bill (e.g. payroll tax). See also Employers' social contributions; Wages and salaries.

Constant price measures

The current price *values* of production-based and expenditure-based gross domestic product estimates and their components can be conceived as the product of the underlying *quantities* of goods and services and their *prices*. Deflating the current price values by price indexes removes the effect of changing prices on the values. The resulting estimates are referred to as constant price estimates (or quantities, or volumes). Constant price estimates are calculated by applying the prices applying in a particular year (*the base year*) to all the years in the series. The Timor-Leste national accounts have adopted 2015 as the base year for its constant price series.

Consumption of fixed capital

The reduction in the value of fixed assets used in production during the accounting period resulting from physical deterioration, normal obsolescence or typical accidental damage. Unforeseen obsolescence, major catastrophes, and the depletion of natural resources are not considered.

Contributions to Growth in GDP

A contribution to growth in GDP is the addition of some aggregate to GDP in percentage points. The sum of the percentage points, or contributions to the growth of all the aggregates, gives the rate of growth of the GDP. It is calculated as $\{(Ag_t - Ag_{t-1}) / GDP_{t-1}\} \times 100$. Where: Ag_t is the value of the aggregate in the year under consideration, Ag_{t-1} is the value of aggregate A in the previous year and GDP_{t-1} is the value of GDP in the previous year. Also, it can be interpreted as "incidence" of aggregate A, defined as the rate of growth of an aggregate, weighted by the share of the aggregate in the GDP in the previous year: $(Ag_t / Ag_{t-1} - 1) \times 100 \times (Ag_{t-1} / GDP_{t-1})$.

Current prices

Estimates are valued at the prices of the period to which the observation relates. For example, estimates for 2009 are valued using 2009 prices, in contrasts with constant price measures where the prices used in valuation refer to the prices of the base year. *See also constant price measures.*

Current transfers

Transfers, other than those classified as capital transfers, in which one institutional unit provides a good, service or cash to another unit without receiving from the latter anything of economic value.

Economically significant prices

Prices that have a significant influence on both the amounts producers will supply and the amounts purchasers wish to buy.

Employers' social contributions

Payments by employers intended to secure for their employees the entitlement to social benefits should certain events occur, or specific circumstances exist, that may affect their employees' income or welfare - work-related accidents and retirement.

Exports of goods and services

The value of goods exported and amounts receivable from non-residents for the provision of non-factorial services by residents.

Final consumption expenditure - general government

Government final consumption expenditure is current expenditure by general government bodies on services to the community such as defense, education, and public order and safety less than any explicit charges for these services. If these are provided free or at charges which cover only a small proportion of costs, the government is considered being the consumer of its output. This output has no observable market value, and so it is valued in the national accounts at its cost of production. It also includes the value of the portion of market output purchased by the General Government sector on behalf of beneficiaries.

Final consumption expenditure - households

Net expenditure on goods and services by persons. This item excludes expenditures by unincorporated businesses and expenditures on assets by non-profit institutions (included in gross fixed capital formation). Also excluded is expenditure on maintenance of dwellings (treated as intermediate expenses of private enterprises), but personal expenditure on motorcycles and other durable goods and the imputed rent of owner-occupied dwellings are included. The value of 'backyard' production (including food produced and consumed on farms) is included in household final consumption expenditure and the payment of wages and salaries in kind (e.g. food and lodging supplied free to employees) is counted in both household income and household final consumption expenditure.

Final consumption expenditure - non-profit institutions serving households

Current expenditure by non-profit institutions on the provision of goods and services to households. This output has no observable market value and so is valued in the national accounts at its cost of production.

Fixed Assets

Are defined as produced assets that are used repeatedly, or continuously, in processes of production for over one year. Fixed assets include not only structures, machinery and equipment and intellectual property products but also cultivated assets such as trees and

animals that are used repeatedly or continuously to produce other products, such as fruit and dairy products.

Gross domestic product, GDP, GDP (E), GDP (P), GDP (I)

In Timor-Leste, from 2010 onwards, the GDP is measured from the Production Approach (GDP (P)), Expenditure Approach (GDP (E)) and Income Approach (GDP (I)). Only the first two are true independent measures: The GDP (P) is the total market value of goods and services produced in Timor-Leste within a period after deducting the cost of goods and services used up in the process of production but before deducting allowances for the consumption of fixed capital. The GDP (E) is equivalent to gross national expenditure plus exports of goods and non-factorial services, less imports of goods and non-factorial services. In TL-NA the *headline* GDP is GDP (E).

From September 2019 onwards, the GDP also considers Oil-GDP under the three approaches, because given the New Maritime Boundary Treaty signed on August 30, 2019, the oil is a resident industry. Before, the oil contribution to the economy came from Royalties and Taxes, and was measured in the GNI. For this reason, and for an item, the comparison between 2018 and 2019 should be considered with caution.

GDP per capita

The ratio of the current or constant price estimate of GDP to an estimate of the resident Timor-Leste population. Population estimates, according to the United Nations, Department of Economic and Social Affairs, Population Division. World Population Prospects, the 2019 Revision (<https://esa.un.org/unpd/wpp/>). It considers GDS Population Censuses (2004, 2010, and 2015) and well-known international parameters for worldwide comparison.

Gross fixed capital formation - general government

Expenditure on new fixed assets plus net expenditure on second-hand fixed assets, whether for additions or replacements. Expenditure on new road works (or upgrading existing roads) is included, but expenditure on road repair and maintenance is classified as government's final consumption expenditure.

Gross fixed capital formation – private

Expenditure on fixed assets. Expenditure on repair and maintenance of fixed assets is excluded, being chargeable to the production account. Additions to fixed assets are capital formation. Also included is a compensation of employees and other costs paid by private enterprise in connection with its own-account capital formation. Expenditure on mineral and petroleum exploration is gross fixed capital formation.

Gross fixed capital formation - public corporations

Expenditure on new fixed assets plus net expenditure on second-hand fixed assets and including both additions and replacements. Also included is a compensation of employees and other costs paid by public corporations in connection with capital works undertaken on their account.

Gross mixed income of unincorporated enterprises

The surplus or deficit accruing from production by unincorporated enterprises. It includes elements of both compensations of employees (returns on labor inputs) and operating surplus (returns on capital inputs). Also included are estimates of the imputed income derived from subsistence agriculture and other informal production activities.

Gross national disposable income (GNDI)

Is equivalent to gross national income plus all secondary income in cash or kind receivable by resident institutional units from the rest of the world (i.e. remittances), less all secondary income in cash or kind payable by resident institutional units to the rest of the world.

Gross national expenditure

The total expenditure within a period by Timor-Leste residents on final goods and services (i.e. excluding goods and services used up during the period in the process of production). It is equivalent to gross domestic product plus imports of goods and services less exports of goods and services.

Gross national income (GNI)

The aggregate value of gross primary incomes for all institutional sectors, including net primary income receivable from non-residents.

Gross national savings

It is calculated as gross national disposable income, less final consumption expenditures of households, general government and non-profit institutions serving households. Gross national savings is the surplus generated in the reference year and available to finance investments, including in fixed capital formation.

Gross operating surplus

The operating surplus accruing to all enterprises, except unincorporated enterprises, from their operations in Timor-Leste. It is the excess of gross output over the sum of intermediate consumption, compensation of employees, and taxes, less subsidies on production and imports. It is calculated before the deduction of consumption of fixed capital, dividends, interest, royalties and land rent, and direct taxes payable. Gross operating surplus is also estimated for the general government, and it equals the general government's consumption of fixed capital.

Gross value added

The value of output in Timor-Leste National Accounts at producer's prices, minus the value of intermediate consumption at purchaser's prices. The term is used to describe gross product by industry. It includes Compensation of employees, Taxes on products and others on production and imports, less subsidies on products and others on production, Gross Operating Surplus, and Gross Mixed Income.

Implicit price deflator

It is got by dividing a current price value by its real counterpart (the constant price measure). When calculated from the primary national accounting aggregates, such as gross domestic product, implicit price deflators relate to a broader range of goods and services in the economy than that represented by any of the individual price indexes such as the consumer price index.

Imports of goods and services

The value of goods imported and amounts payable to non-residents for the provision of non-factorial services to residents.

Individual consumption

An individual consumption of good or service is one that is gained by a household and used to satisfy the needs and wants of members of that household. Individual goods and services can always be bought and sold on the market, although they may also be provided free, or at prices that are not significant, or as transfers in kind. Individual goods and services are 'private', as distinct from 'public'. *See also Collective consumption.*

Institutional unit

An institutional unit is an economic entity that is capable, in its own right, of owning assets, incurring liabilities, engaging in economic activities and engaging in transactions with other entities.

Intermediate consumption

Comprises the value of the goods and services used as inputs by a process of production, excluding compensation of employees and the consumption of fixed capital.

Inventories

Comprise stocks of outputs that are held at the end of a period by the units that produced them before they're being further processed, sold, delivered to other units or used in other ways and stocks of products acquired from other units used for intermediate consumption or resale without further processing.

Livestock

Livestock assets are classified as either fixed assets or inventories. That livestock used in the production of other products (e.g. breeding stock and dairy cattle) are fixed assets. Inventories cover all other livestock types and include those animals raised for meat or other one-off products (e.g. leather).

Market output

The output that is sold at prices that are economically significant or otherwise disposed of on the market, or intended for sale or disposal on the market.

Net secondary income from non-residents

All transfers to or from non-residents to resident government or private institutional units, which are not payments for goods and services, compensation of employees or property income.

Non-market output

Goods and services produced by an institutional unit that are supplied free or at prices that are not economically significant.

Other subsidies on production

Comprise all subsidies, except subsidies on products, which resident enterprises may receive because of engaging in production. Other subsidies on production include subsidies related to the payroll or workforce numbers, including subsidies payable on the total wage or salary bill, on numbers employed, or on the employment of particular types of persons, e.g. persons with disabilities or persons who have been unemployed for a long period. The subsidies may also be intended to cover some or all of the costs of training schemes organized or financed by enterprises. Subsidies aimed at reducing pollution are also included. See also Subsidies on products.

Other taxes on production

It comprises all taxes that enterprises incur because of engaging in production, except taxes on products. Other taxes on production include taxes related to the payroll or workforce, excluding compulsory social security contributions paid by employers and any taxes paid by the employees themselves out of their wages or salaries. Recurrent taxes on land, buildings or other structures; some business and professional licenses where no service is provided by the Government in return; taxes on the use of fixed assets or other activities; stamp duties; taxes on pollution; and taxes on international transactions.

Output

It comprises those goods and services that are produced within an establishment that become available for use outside that establishment, plus any products produced for own final use.

Primary incomes

Comprise incomes that accrue to institutional units because of their involvement in processes of production or their ownership of assets that may be needed for production.

Property income

Is the income receivable by the owner of a financial asset or a tangible non-produced asset in return for providing funds, or putting a tangible non-produced asset at the disposal of another institutional unit.

Purchasers' price

The amount paid by the purchaser, excluding any deductible tax, to take delivery of a unit of a good or service at the time and place required by the purchaser. The purchaser's price of a good includes any transport charges paid by the purchaser to take delivery at the required time and place.

Secondary income

Comprises receipt and payment of current transfers.

Social assistance benefits in cash to residents

Includes current transfers to persons from general government in return for which no services are rendered or goods supplied. Principal components include scholarships; maternity sickness and unemployment benefits; family allowances; and widows' age, invalid and repatriation pensions.

Statistical discrepancy, SD, SD (E) and SD (P)

Statistical discrepancy is the numerical difference got for the estimation of the same variable using different approaches, sources, and methods. Applied to GDP, there are different approaches, GDP (E) or GDP (P) for example. In TL-NA 2000-2013, given that GDP (E) is the *headline* GDP, then the Statistical Discrepancy is $SD = SD (E) = GDP(E) - GDP(P)$.

Subsidies on products

Subsidies payable per unit of a good or service. The subsidy may be a specific amount of money per unit of a quantity of a good or service, or it may be calculated ad valorem as a specified percentage of the price per unit. A subsidy may also be calculated as the difference between a specified target price and the market price paid by a purchaser. A subsidy on a product becomes payable when the product is produced, sold or imported, but it may also become payable in other circumstances, such as when a product is exported, leased, transferred, delivered or used for own consumption or own capital formation.

Taxes less subsidies on production and imports

Defined as 'taxes on products' plus 'other taxes on production' less 'subsidies on products' less 'other subsidies on production'.

Taxes on production and imports

Comprise 'taxes on products' and 'other taxes on production'. These taxes do not include any taxes on the profits or other income received by an enterprise. They are payable, irrespective of the profitability of the production process. They may be payable on the land, fixed assets or labor employed in the production process, or on specific activities or transactions.

Taxes on products

Taxes payable per unit of some good or service. The tax may be a specific amount of money per unit of a quantity of a good or service (quantity being measured either in terms of discrete units or continuous physical variables such as volume, weight, strength, distance, time). Or it may be calculated ad valorem as a specified percentage of the price per unit or value of the goods or services transacted. A tax on a product becomes payable when the product is produced, sold or imported. Still, it may also become payable in other circumstances, such as when a good is exported, leased, transferred, delivered, or used for own consumption or own capital formation.

Terms of trade

Calculated by dividing the export implicit price deflator by the import implicit price deflator and multiplying by 100.

Total factor income

That part of the cost of producing the gross domestic product that comprises gross payments to factors of production (labor and capital). It represents the value added by these factors in the process of production and is equivalent to gross domestic product less taxes plus subsidies on production and imports.

Wages and salaries

Comprise amounts payable in cash including the value of any social contributions, income taxes, fringe benefits tax, etc., payable by the employee even if they are withheld by the employer for administrative convenience or other reasons and paid to social insurance schemes, tax authorities, etc., on behalf of the employee. Wages and salaries may be paid as remuneration in kind instead of, or besides, compensation in cash. Separation, termination, and redundancy payments are also included in wages and salaries. Wages and salaries are also measured as far as possible on an accrual rather than a strictly cash basis. See also Employers' social contributions; Compensation of employees.
