FOREWORD

It is with great pleasure that I present the Timor-Leste's National Accounts for 2006-2025 (TL-NA 2006-2025). This comprehensive publication offers a consistent set of macroeconomic accounts that are invaluable for economic analysis and policy-making in our nation.

The TL-NA 2006-2025 is a testament to our commitment to transparency and accuracy in economic reporting. It covers all designated activities and their consequences for economic agents, using identical values and consistent accounting rules to establish the impact of actions on all parties concerned.

This work has been meticulously produced by the National Institute of Statistics of the Ministry of Finance, under the capable supervision of its President, Mr. Elias dos Santos Ferreira, with valuable input from national consultant, Faviana Bosco de Sousa. The statistics within are based on a robust combination of surveys, administrative data, and other reliable sources.

In line with international best practices, the compilation of all economic activity data follows the United Nations System of National Accounts 2008 (2008 SNA). This globally recognized standard ensures that our measures of economic activity adhere to strict accounting conventions based on sound economic principles.

The TL-NA 2006-2025 provides an integrated set of accounts, including estimates of Gross Domestic Product (GDP) reconciled using three consistent approaches - production, expenditure, and income. These estimates are as independent as basic sources allow, with the reconciliation process conducted separately for the oil and non-oil sectors of our economy.

Furthermore, this publication extends beyond GDP estimates to include Gross National Income (GNI), Gross National Disposable Income (GNDI), and Gross Saving, all compiled under the concepts and definitions of the 2008 SNA.

I would like to express my sincere appreciation to the National Institute of Statistics, Ministry of Finance, for their successful implementation of this project. My gratitude also extends to the many individuals who have contributed their expertise and effort to this work.

For those interested in delving deeper into the methodological aspects of this publication, I encourage you to visit the National Institute of Statistics website at <https://inetl-ip.gov.tl/>, where you can find detailed notes on the concepts, classifications, methods, and sources used in the TL-NA.

This publication represents a significant step forward in our understanding of Timor-Leste's economic landscape. It will undoubtedly serve as a crucial tool for policymakers, researchers, and all those invested in the economic development of our nation.

Santina José Rodrigues F. Viegas Cardoso
Minister of Finance

September 2026

PREFACE

The publication of Timor-Leste's National Accounts for 2006-2025 (TL-NA 2006-2025) represents the headline statistical dataset provided by the National Institute of Statistics (INETL) under the Ministry of Finance. This publication plays a crucial role in data informed economic policy making, an integral part of Timor-Leste's ongoing development.

This printed publication contains all the statistics and a summary of the data, and an online version is accessible at <https://inetl-ip.gov.tl/>.

This publication contains estimates of Gross Domestic Product (GDP), Gross National Income (GNI), Gross National Disposable Income (GNDI), and Gross Saving to give a complete picture of the relationship between product, income and saving aggregates for Timor-Leste. In addition, the TL-NA includes the quarterly indicator for Non-Oil GDP by expenditure approach (non-Oil qiGDPe) from 2015 onwards. All the estimates have been calculated following the System of National Accounts 2008 (SNA 2008), the international standard and classification for compiling macroeconomic accounts.

Regarding the revision policy of the Timor-Leste National Accounts, TL-NA 2006-2025 includes revisions and updates based on newly available and updated primary data sources. As a result, some estimates may differ from those published in TL-NA 2005-2024. The key changes incorporated in the TL-NA 2006-2025, published in September 2026, include:

- Updated international price data based on the International Monetary Fund's World Economic Outlook.
- Revised agricultural production estimates based on updated Food and Agriculture Organization (FAO) data compilations.
- Updated Balance of Payments data, which affect Gross National Income (GNI) and Gross National Disposable Income (GNDI).
- Inclusion of public enterprise data in the National Accounts framework for the first time, covering the period 2019-2025. This inclusion mainly affects GDP by production approach and the corresponding growth rates for 2019-2025.

A revision was made between the preliminary and final estimates of 2025 GDP by expenditure. The preliminary estimate, released in March 2026, indicated GDP growth of 4.5 percent, while the final estimate in the September 2026 publication was revised to 4.3 percent. The main factors contributing to the revision were:

- Private expenditure: The preliminary estimate was based on a more limited set of indicators for household consumption and private investment. The final estimate incorporated information from Business Activity Survey 2025.
- Public expenditure: The preliminary estimate relied primarily on data from the Transparency Portal accessed in Early 2026. The final estimate incorporated more detailed public expenditure information from the Ministry of Finance's Financial Report (July 2026), resulting in refined GDP estimates.

- Development partners: The final estimate incorporated more complete data on expenditure by development partners.
- External trade: The final estimate incorporated more complete data on trade in goods and services.

Rebased Timor Leste GDP scheduled for release in September 2027:

- GDP estimates will be rebased to a base period of 2025, from a current base period of 2015. Rebased estimates will be first published in the Final GDP publication in September 2027.
- Alongside rebasing, new data sources will be introduced and methods improved. This will result in historical revisions to GDP growth back to 2015.
- Further information about the forthcoming changes to the national accounts will be published in March 2027 in the Preliminary GDP publication, as a information note.
- If you have any questions of concerns in the interim period, please contact : Chief of National Accounts Department, Ms. Marciana Urbano da Cruz at mudcruz@mof.gov.tl and copied to Director of Economic Statistics, Mr. Cristino Gusmão at cgusmao@mof.gov.tl.

Acknowledgements

The TL-NA 2006-2025 was produced under my direction within the National Institute of Statistics, Ministry of Finance.

This publication was implemented by a team of the Directorate of Economic Statistics (DES) in the Department of National Account and Balance of Payment (DNABP). Comprising the staff of the DNABP within the DES-INETL-MoF, Marciana Urbano da Cruz (Head of Department), Alzira Doutel, and Geovania Maria da Cruz Vieira. With the support of Faviana Bosco de Sousa, national consultant. Additionally, the project received contributions from the Director of Economic Statistics, Cristino Gusmão.

National Accounts Statistics is a comprehensive and valuable data source for policymaking, analysis, and research. According to international standards, the TL-NA statistics are published nine months after the reference year to which they relate.

TIMOR-LESTE ECONOMY IN 2025

Gross Domestic Product

In 2025, Timor-Leste's non-oil GDP at constant prices grew by 4.3%, maintaining the same 4.3% growth recorded in 2024. In nominal terms, non-oil GDP increased by 7.7%, reflecting both real economic growth (constant prices), as well as higher prices. Higher prices drive the difference between nominal and real growth and are reflected by a 3.4% increase in the non-oil GDP Implicit Price Deflator (IPD).

Growth in non-oil GDP was primarily driven by domestic expenditure and exports. Private expenditure was the largest positive contributor, adding 3.5 percentage points to non-oil GDP growth, supported by strength in private consumption and investment. Exports contributed a further 2.0 percentage points, reflecting strong growth in both goods and services exports.

Graph 1: TL 2015–2025 Non-Oil GDP Growth at Constant Prices (In Percent)

Graph 2: Percentage-Point Contributions to Non-Oil GDP Growth at Constant Prices by Expenditure, 2024 and 2025

Public expenditure contributed 1.9 percentage points to GDP growth in 2025, substantially lower than its 8.5 percentage points contribution in 2024, reflecting the decline in public investment. Expenditure by development partners also made a positive contribution of 1.8 percentage points.

A rise in imports of 6.9% detracted 4.4 percentage points from non-oil GDP, partially offsetting strength in domestic expenditure and exports. Adding to this was a 0.5 percentage points deduction due to changes in inventories.

While the non-oil economy continued to expand, Oil GDP at constant prices remained negative at \$17 million in 2025, following the cessation of Bayu-Undan production in June 2025 as the field approached the end of its productive life. Compared with 2024, which recorded a full year of production, the 2025 result reflects the cessation of production while expenses continued to be occurred. Oil-sector output at constant prices was valued at \$68 million in 2025, compared with \$79 million in 2024, while intermediate consumption at constant prices declined substantially from \$138 million to \$88 million. The lower intermediate consumption partly offset the decline in oil production, resulting in Oil GDP at constant prices of negative \$17 million in 2025, compared with negative \$58 million in 2024.

Per capita GDP

Per capita non-oil GDP at constant prices has risen consistently since 2020, reaching US\$1,272 by 2025 — slightly above the pre-pandemic level of US\$1,266 recorded in 2019. Over this period, non-oil GDP growth outpaced population growth, resulting in sustained growth in non-oil GDP per capita. Despite this recovery, the 2025 level remains below the 2015–2016 level (US\$1,319 and US\$1,338 respectively).

Graph 3: TL 2015-2025 Non-Oil GDP per Capita (Constant US\$)

Gross National Income

In 2025, at current prices, GNI was \$2,225 million, exceeding GDP of \$2,001 million, reflecting a primary income surplus of \$224 million, a slight increase from \$220 million in 2024. GNI has exceeded GDP in most years since 2015, driven by Petroleum Fund investment returns. However, the surplus has fallen from \$1,198 million in 2015 to a deficit in 2021-2022, before recovering to roughly \$214–\$224 million over 2023–2025. The gap between GDP and GNI has therefore narrowed dramatically from its 2015 peak, but the surplus has been stable and slightly growing in recent years.

Graph 4: Total GDP and GNI at Current Prices (millions of US dollars)

Non-Oil Gross Domestic Product By Expenditure

The following table displays the growth rates and the contributions to the growth of the expenditures from the public, private, development partners and external trade.

Table 1: Components of the Non-Oil GDP (E) 2024-2025 (At Constant Prices)

	Growth Rates (%)		Contribution to growth (percentage points)	
	2024	2025	2024	2025
Public Expenditure	13.1	2.7	8.5	1.9
Consumption	2.6	5.0	1.3	2.5
Investment	50.4	-2.9	7.2	-0.6
Development partners	-4.7	17.5	-0.5	1.8
Consumption	-3.7	14.6	-0.4	1.3
Investment	-10.1	35.0	-0.2	0.5
Private Expenditure	5.2	4.6	3.9	3.5
Consumption	3.6	3.8	2.5	2.7
Investment	32.9	14.8	1.3	0.8
Exports	13.3	63.9	0.4	2.0
Goods	10.5	89.7	0.1	0.6
Services	14.0	57.3	0.3	1.4
Less: Imports	14.6	6.9	8.4	4.4
Goods	14.9	4.3	5.5	1.7
Services	14.1	11.5	3.0	2.6
Change in Inventories	14.4	-14.9	0.5	-0.5
GDP Expenditure	4.3	4.3	4.3	4.3

Public Expenditure

Public expenditure rose 2.7% in 2025, easing from 13.1% in 2024, with its contribution to growth falling from 8.5 to 1.9 percentage points. This was driven by a swing in public investment from 50.4% growth in 2024 to a 2.9% contraction in 2025 (contribution falling from 7.2 to -0.6 percentage points), however this series still remains at high levels. The decline in public investment was mainly due to a 50.2% decrease in minor capital expenditure, which outweighed a 5.3% increase in capital development expenditure.

In contrast, public consumption growth accelerated from 2.6% to 5.0%, with its contribution to GDP growth increasing from 1.3 to 2.5 percentage points, mainly reflecting an increase in public employment.

Development Partners

Development partner spending increased by 17.5% in 2025, contributing 1.8 percentage points to overall GDP growth, a sharp turnaround from the 4.7% contraction recorded in 2024, which subtracted 0.5 percentage points from growth. The increase was mainly associated with development partner programs implemented in partnership with the Government.

Private Expenditure

Private expenditure grew by 4.6% in 2025, contributing 3.5 percentage points to overall GDP growth, slightly lower than 5.2% growth and a contribution of 3.9 percentage points in 2024.

Private investment grew 14.8% moderating from 32.9% growth recorded in 2024. Its contribution to non-oil GDP growth similarly declined from 1.3 to 0.8 percentage points. This was consistent with a moderation in construction sector growth, from around 12.0% in 2024 to around 3.1% in 2025. The slowdown in private investment also coincided with a decline in public investment, which shifted from 50.4% growth in 2024 to a 2.9% contraction in 2025, highlighting the close relationship between public and private investment activity in Timor-Leste.

Private consumption grew 3.8% up from 3.6% growth in 2024, increasing its contribution to GDP growth from 2.5 to 2.7 percentage points. This was driven by stronger activity in the retail and wholesale trade sector, which grew 5.5% in 2025, as well as increased agricultural production, which is mostly consumed by TL resident households, particularly rice and maize, which rose by 79% and 16%, respectively.

This was also reflected at the household level, with household consumption per capita rising to approximately \$895 in 2025, around 12.0% above the pre pandemic (2019) level and remaining above its long-term trend for the fourth consecutive year.

Graph 5: Household Consumption per Capita, Constant Prices (base year 2015) (*Thousands of US Dollars*)

Change In Inventories

The change in inventories declined 14.9% in 2025, subtracting 0.5 percentages from overall GDP growth, mainly due to a decline in inventories of the wholesale and retail trade industry.

Exports and Imports

Exports of non-oil goods and services increased by 63.9% in 2025, contributing 2.0 percentage points to overall GDP growth, compared with growth of 13.3% and a contribution of 0.4 percentage points in 2024. The increase was driven by stronger growth in both goods and services exports.

Exports of goods grew by 89.7% in 2025, contributing 0.6 percentage points to overall GDP growth, up from 10.5% growth and a contribution of 0.1 percentage points in 2024. Exports of services increased by 57.3%, contributing 1.4 percentage points to overall growth, compared with growth of 14.0% and a contribution of 0.3 percentage points in 2024. The increase in exports of goods was driven mainly by a 93.4% increase in the volume of coffee exports, while the increase in services exports was largely reflected in travel and transport services.

Imports of non-oil goods and services increased by 6.9% in 2025, subtracting 4.4 percentage points from overall GDP growth, down from growth of 14.6% and a negative contribution of 8.4 percentage points in 2024. Imports of goods grew by 4.3% in 2025, subtracting 1.7 percentage

points from overall growth, compared with growth of 14.9% and a negative contribution of 5.5 percentage points in 2024. Imports of services increased by 11.5%, subtracting 2.6 percentage points from overall growth, down from growth of 14.1% and a negative contribution of 3.0 percentage points in 2024. The increase in goods imports in 2025 was driven mainly by higher imports of food products, which increased by 14.0%, and mineral products, which increased by 14.4%.

Beyond their direct contribution to GDP growth, imports also reflect the broader structural relationship between domestic demand and non-oil GDP.

Throughout the 2015–2025 period, domestic demand consistently exceeded non-oil GDP, with the gap largely met through imports. This resulted in a persistent trade deficit in every year of the period. The pattern reflects the structural characteristics of Timor-Leste's non-oil economy, where domestic production capacity remains insufficient to meet the level of domestic demand, requiring imports to fill the gap.

Graph 6: Relationship between GDP, Consumption and Investment, and Imports, at Constant Prices (millions of US Dollars)

The size of the trade deficit generally moves in line with the gap between domestic demand and non-oil GDP. When domestic demand grows faster than non-oil GDP, the trade deficit tends to widen, while slower domestic demand growth tends to reduce the deficit. This pattern was evident in 2020–2021, when weaker domestic demand contributed to a narrowing of the trade deficit. More recently, stronger domestic demand growth relative to non-oil GDP has contributed to a widening trade deficit. This relationship highlights the non-oil economy's continued reliance on imports to meet domestic demand.

Non-Oil Quarterly Gross Domestic Product by Expenditure

The quarterly GDP indicator, presented in table 2, uses the expenditure approach, replicating annual GDP and then temporally disaggregating using quarterly indicators.

Table 2: Quarterly Non-Oil GDP (E) Indicator: Contribution to Growth (pp) at Constant Prices

Quarterly components	Q1	Q2	Q3	Q4	2025
Private consumption	0.9	5.1	5.4	0.3	2.7
Private investment	2.0	0.0	1.1	0.3	0.8
Development Partners	2.2	1.6	2.1	1.4	1.8
Gen. Gov. Consumption	9.6	3.1	-0.6	0.4	2.5
Public investment	0.5	1.4	-3.2	-0.6	-0.6
Export goods & services	-1.4	1.1	3.9	3.0	2.0
Less: Import goods & services	16.9	1.5	1.0	1.7	4.4
Change in Inventories	-0.5	-0.6	-0.6	-0.4	-0.5
Non-Oil GDP(E)	-3.6	10.3	7.3	2.7	4.3

On a year-on-year quarterly basis, all quarters in 2025 showed positive growth except Q1.

The largest year-on-year contribution to annual non-oil GDP growth was observed in Q2, accounting for approximately 10.3 pp, primarily attributable to expansions in consumption of both private and public sector. Q3 provided the second-largest positive contribution, adding about 7.3 pp, supported by private consumption, development partners' expenditure and private export. Q4 also registered a positive contribution of 2.7 pp. Conversely, Q1 exerted a negative impact, subtracting 3.6 pp, thereby dampening overall annual non-oil GDP growth.

Gross Domestic Product By Broad Economic Industries

The structure of non-oil economy, divided into primary¹, secondary², and tertiary³ industries, has remained relatively stable over the past decade, with only gradual shifts in relative shares. Over this period, the secondary industries have recorded a slow decline in importance, reflecting the limited scale of manufacturing and the heavy reliance of construction on government-led projects. In contrast, both the primary sector and the tertiary sector have managed to modestly increase their shares, demonstrating their resilience as key pillars of economic activity.

In 2025, the tertiary sector led the economy with 69.3% of non-oil GDP, followed by the primary industries (18.8%) and secondary industries (11.9%). This illustrates how Timor-Leste's economy remains service oriented.

Graph 7: Structure of the non-oil Economy 2015-2025, Constant Prices (percent)

¹ Primary Industry includes Agriculture, Livestock, and Forestry.

² Secondary Industry includes construction and manufacturing.

³ Tertiary Industry includes accommodation & restaurant, financial & insurance, information communication, other services, public administrations..., real estate activities, retail & wholesale, and transport.

Primary Industry

The primary industries grew by 3.0% in 2025, up from 0.6% in 2024. This sector's Gross Value Added (GVA) rose from \$331 million in 2024 to \$341 million in 2025, with its contribution to GDP growth rising from 0.1 pp to 0.6 percentage points.

Secondary Industry

The secondary industries grew by 5.4% in 2025, easing from 10.7% in 2024, with GVA increasing from \$204 million to \$215 million. Its contribution to GDP growth declined from 1.2 percentage points in 2024 to 0.6 percentage points in 2025, consistent with a sharp deceleration in Construction sector growth, from around 12% in 2024 to around 2% in 2025. This slowdown in construction activity coincided with a sharp slowdown in public investment, which shifted from 50.4% growth in 2024 to a 2.9% contraction in 2025.

Tertiary Industry

The tertiary industries continued to dominate Timor-Leste's economy in 2025, accounting for 69.3% of non-oil GDP and recording a GVA of \$1,254 million, up from \$1,200 million in 2024. This sector grew by 4.6% in 2025, slightly below the 5.1% growth recorded in 2024, though its contribution to GDP growth fell more notably, from 3.5 percentage points in 2024 to 3.2 percentage points in 2025, still the largest contribution of any sector in both years, reaffirming the economy's continued reliance on services and government-related activity.

Gross Domestic Product By Industry

GDP-Production (GDP-P) demonstrated continued growth, increasing by 4.4% in 2025. Growth strengthened across most of Timor-Leste's non-oil industries in 2025 compared with 2024, led by Manufacturing, Accommodations & Restaurant, and Transport, all of which saw growth rates rise substantially. Construction was the main exception among the stronger-performing industries in 2024, easing sharply in 2025, consistent with the broader slowdown in investment activity.

Graph 8: Growth Rates by Industries, Constant Prices, 2025 (percent)

- Manufacturing grew 19.7% in 2025, mainly from high production such as coffee processing and beverage production, consistent with strong coffee exports.

- Construction grew at a 3.1% in 2025 down from 11.9% in 2024. This is consistent with the contraction in public investment and slower growth in private investment.
- Retail & Wholesale grew 5.9% in 2025, in line with the increase in merchandise import, private consumption, and development partners' consumption expenditure.
- Accommodation & Restaurant grew 14.0% in 2025, driven by increased tourism inflows and higher demand for restaurants, catering, hotels, and tourism services.
- Transport grew 21.5% in 2025, supported by rising demand for freight services, increased air passenger transport, and warehousing, linked to trade and market activity.
- Information and Communication grew 34.3% in 2025, driven by rising demand for internet services, mobile communication, and digital platforms.
- Financial and Insurance Activities grew 5.7% in 2025, mainly driven by a rise in the number of creditors to businesses, alongside improving banking operations and microfinance activities, as commercial banks and credit unions expanded their reach in both urban and rural areas.
- Agriculture, Forestry and Fishing grew 3.0% in 2025, supported by an increase in rice (79%) and maize (16%) production.
- Real Estate Activities grew 2.3% in 2025, as the post-pandemic recovery increased real estate activities, particularly in commercial rentals.
- Public Administration grew 3.2% in 2025, reflecting growth in public employment.
- Other Services contracted 5.9% in 2025.

Initial Estimate of Non-Oil Gross Domestic Product By Expenditure 2026

Timor-Leste's Non-Oil GDP is estimated to have increased by 4.2 percent in 2026 in constant price terms. Growth is expected to be driven by private consumption and public expenditure. Private consumption is expected to increase by 4.0 percent, contributing 2.8 percentage points (pp), while public consumption is expected to increase 3.5%, contributing 1.8 pp and public investment is expected to increase by 6.0 percent, contributing 1.1 pp. Exports of goods and services is expected to increase by 10.4 percent and contribute 0.5 pp. In contrast, imports of goods and services is expected to increase by 4.6 percent, subtracting 3.0 pp from GDP growth.

Private consumption is expected to increase by 4.0 percent, contributing 2.8 pp to Non-Oil GDP growth. Growth is projected to be driven by higher household disposable income, including government transfers, while increased imports of consumer goods will help meet stronger domestic household demand.

Private investment is expected to increase by 9.9 percent, contributing 0.6 pp to GDP growth. The increase reflects private-sector activities associated with infrastructure and development projects, particularly in telecommunications, agriculture, and other productive sectors.

Development partner activities is expected to increase by 2.9 percent, contributing 0.3 pp to GDP growth. Growth was mainly associated with infrastructure and development programs, including activities in health and agriculture.

General Government Final Consumption Expenditure is expected to increase by 3.5 percent, contributing 1.8 pp to GDP growth. The increase reflects higher government expenditure on goods and services.

Public investment is expected to increase by 6.0 percent, contributing 1.1 pp to GDP growth. Growth will likely be supported by continued investment in infrastructure, including roads, bridges, communication infrastructure, and agriculture.

Exports of goods and services are expected to increase by 10.4 percent, contributing 0.5 pp to GDP growth. Goods exports are projected to increase by 11.9 percent, supported mainly by coffee, service exports are expected to increase by 9.9 percent, reflecting higher demand associated with international events, conferences, and visitor activity.

Imports of goods and services are expected to increase by 4.6 percent, subtracting 3.0 pp from Non-Oil GDP growth. Goods imports are expected to increase by 4.3 percent, contributing a 1.7 pp deduction, while services imports are expected to increase by 5.0 percent, subtracting 1.2 pp. The increase in imports reflects stronger domestic demand and higher demand for goods and services associated with investment, government activities, and economic activity.

Change in inventories is expected to increase by 0.9 percent in 2026, contributing 0.0 pp to Non-Oil GDP growth.

Table 3. Initial Estimate of the Non-Oil GDP (E) 2026⁴ at Constant Prices

	Annual growth (%)	Contribution (pp)
Private consumption	4.0	2.8
Private investment	9.9	0.6
Development Partners	2.9	0.3
General Government FCE	3.5	1.8
Public investment	6.0	1.1
Exports of goods and services	10.4	0.5
Exports of goods	11.9	0.1
Exports of services	9.9	0.4
<i>Less:</i> Imports of goods and services	4.6	3.0
Imports of goods	4.3	1.7
Imports of services	5.0	1.2
Change in inventories	0.9	0.0
Non-Oil GDP (e)*	4.2	4.2

⁴ **DISCLAIMER:** This is the Initial Estimation version of GDP 2026 published in September 2026. It is based on the latest available information about Timor-Leste's expenditure indicators to provide timely information on Timor-Leste's economic growth. The preliminary version, to be released in March 2027, will be more accurate because it will include more data from the second half of 2026, meaning there could be slightly different from this version. The final GDP 2026, covering more complete data, including GDP production, will be published in September 2027. Lastly, the reviewed version will be published in September 2028 (See ANNEX: Review Policy of TL National Accounts).

n/a) The contribution to growth of the Oil Sector is not applicable for 2019 because it is a resident industry from September 2019 onwards, according to the New Maritime Boundary Treaty signed on August, 30, 2019.

**) The contributions to growth of the total (Oil Sector plus Non-Oil Sector) for 2019, includes Oil Sector from September 2019 onwards. So the comparison with 2018 should be done with caution.

***) the comparison between 2019 and 2020 need to be made with care, because it is comparing four months of oil production in 2019 with twelve months of oil production in 2020.

n/a) The growth rate of the Oil Sector is not applicable for 2019 because it is a resident industry from September 2019 onwards, according to the New Maritime Boundary Treaty signed on August, 30. 2019.

**) The growth rate of the total (Oil Sector plus Non-Oil Sector) for 2019, includes Oil Sector from September 2019 onwards. So the comparison with 2018 should be done with caution.

***) the comparison between 2019 and 2020 need to be made with care, because it is comparing four months of oil production in 2019 with twelve months of oil production in 2020.

GLOSSARY OF TERMS

Actual consumption

To allow because the consumption of goods and services by households may be paid for, in cash or in kind by the general government sector, an alternative measure of consumption called actual consumption had been defined. It is measured by first separating government's final consumption expenditure (GFCE) into individual and collective consumption. Individual consumption refers to services that are provided by the general government to households that are consumed individually, for example, health and education. Collective consumption relates to the provision of public services, such as policing and defense. Household actual consumption is measured as household final consumption expenditure plus individual consumption within GFCE. General government actual consumption is calculated as GFCE less individual consumption. Actual consumption is a useful measure for international comparison, since countries often have different systems for providing individual services.

Capital transfers

Transactions in which the ownership of an asset (other than cash and inventories) is transferred from one institutional unit to another, in which cash is transferred to enable the recipient to acquire another asset or in which the funds realized by the disposal of another asset are transferred.

Changes in inventories held by enterprises and general government

It is an estimate of the change in the book value of inventories held by enterprises and the government from the start of the reference year to the end of the year. In other terms, it is the value at the level of establishment and for an accounting period, of the additions fewer withdrawals to the stock of inventories of raw materials and finished products. The additions originate in production and imports and retreats for use as intermediate consumption and final demand.

Collective consumption

Services provided simultaneously to all members of the community or all members of a particular section of the community, such as all households living in a particular region. Collective services are automatically acquired and consumed by all members of the community, or group of households in question, with no action on their part. Typical examples are public administration and the provision of security, either at a national or local level. Collective services are the 'public goods' of economic theory. Collective services cannot be sold to individuals on the market, and they are financed by government units out of taxation or other incomes.

Compensation of employees

The total remuneration, in cash or kind, payable by an enterprise to an employee in return for work by the employee during the accounting period. It is further classified into two sub-components: wages and salaries; and employers' social contributions. Compensation of

employees is not payable regarding unpaid work undertaken voluntarily, including the work by members of a household within an unincorporated enterprise owned by the same household. Compensation of employees excludes any taxes payable by the employer on the wage and salary bill (e.g. payroll tax). See also Employers' social contributions; Wages and salaries.

Constant price measures

The current price *values* of production-based and expenditure-based gross domestic product estimates and their components can be conceived as the product of the underlying *quantities* of goods and services and their *prices*. Deflating the current price values by price indexes removes the effect of changing prices on the values. The resulting estimates are referred to as constant price estimates (or quantities, or volumes). Constant price estimates are calculated by applying the prices applying in a particular year (*the base year*) to all the years in the series. The Timor-Leste national accounts have adopted 2015 as the base year for its constant price series.

Consumption of fixed capital

The reduction in the value of fixed assets used in production during the accounting period resulting from physical deterioration, normal obsolescence or typical accidental damage. Unforeseen obsolescence, major catastrophes, and the depletion of natural resources are not considered.

Contributions to Growth in GDP

A contribution to growth in GDP is the addition of some aggregate to GDP in percentage points. The sum of the percentage points, or contributions to the growth of all the aggregates, gives the rate of growth of the GDP. It is calculated as $\{(Ag_t - Ag_{t-1}) / GDP_{t-1}\} \times 100$. Where: Ag_t is the value of the aggregate in the year under consideration, Ag_{t-1} is the value of aggregate A in the previous year and GDP_{t-1} is the value of GDP in the previous year. Also, it can be interpreted as "incidence" of aggregate A, defined as the rate of growth of an aggregate, weighted by the share of the aggregate in the GDP in the previous year: $(Ag_t / Ag_{t-1} - 1) \times 100 \times (Ag_{t-1} / GDP_{t-1})$.

Current prices

Estimates are valued at the prices of the period to which the observation relates. For example, estimates for 2009 are valued using 2009 prices, in contrasts with constant price measures where the prices used in valuation refer to the prices of the base year. *See also constant price measures.*

Current transfers

Transfers, other than those classified as capital transfers, in which one institutional unit provides a good, service or cash to another unit without receiving from the latter anything of economic value.

Economically significant prices

Prices that have a significant influence on both the amounts producers will supply and the amounts purchasers wish to buy.

Employers' social contributions

Payments by employers intended to secure for their employees the entitlement to social benefits should certain events occur, or specific circumstances exist, that may affect their employees' income or welfare - work-related accidents and retirement.

Exports of goods and services

The value of goods exported and amounts receivable from non-residents for the provision of non-factorial services by residents.

Final consumption expenditure - general government

Government final consumption expenditure is current expenditure by general government bodies on services to the community such as defense, education, and public order and safety less than any explicit charges for these services. If these are provided free or at charges which cover only a small proportion of costs, the government is considered being the consumer of its output. This output has no observable market value, and so it is valued in the national accounts at its cost of production. It also includes the value of the portion of market output purchased by the General Government sector on behalf of beneficiaries.

Final consumption expenditure - households

Net expenditure on goods and services by persons. This item excludes expenditures by unincorporated businesses and expenditures on assets by non-profit institutions (included in gross fixed capital formation). Also excluded is expenditure on maintenance of dwellings (treated as intermediate expenses of private enterprises), but personal expenditure on motorcycles and other durable goods and the imputed rent of owner-occupied dwellings are included. The value of 'backyard' production (including food produced and consumed on farms) is included in household final consumption expenditure and the payment of wages and salaries in kind (e.g. food and lodging supplied free to employees) is counted in both household income and household final consumption expenditure.

Final consumption expenditure - non-profit institutions serving households

Current expenditure by non-profit institutions on the provision of goods and services to households. This output has no observable market value and so is valued in the national accounts at its cost of production.

Fixed Assets

Are defined as produced assets that are used repeatedly, or continuously, in processes of production for over one year. Fixed assets include not only structures, machinery and equipment and intellectual property products but also cultivated assets such as trees and

animals that are used repeatedly or continuously to produce other products, such as fruit and dairy products.

Gross domestic product, GDP, GDP (E), GDP (P), GDP (I)

In Timor-Leste, from 2010 onwards, the GDP is measured from the Production Approach (GDP (P)), Expenditure Approach (GDP (E)) and Income Approach (GDP (I)). Only the first two are true independent measures: The GDP (P) is the total market value of goods and services produced in Timor-Leste within a period after deducting the cost of goods and services used up in the process of production but before deducting allowances for the consumption of fixed capital. The GDP (E) is equivalent to gross national expenditure plus exports of goods and non-factorial services, less imports of goods and non-factorial services. In TL-NA the *headline* GDP is GDP (E).

From September 2019 onwards, the GDP also considers Oil-GDP under the three approaches, because given the New Maritime Boundary Treaty signed on August 30. 2019, the oil is a resident industry. Before, the oil contribution to the economy came from Royalties and Taxes, and was measured in the GNI. For this reason, and for an item, the comparison between 2018 and 2019 should be considered with caution.

GDP per capita

The ratio of the current or constant price estimate of GDP to an estimate of the resident Timor-Leste population. Population estimates, according to the United Nations, Department of Economic and Social Affairs, Population Division. World Population Prospects, the 2022 Revision (<https://esa.un.org/unpd/wpp/>). It considers GDS Population Censuses (2004, 2010, 2015, and 2022) and well-known international parameters for worldwide comparison.

Gross fixed capital formation - general government

Expenditure on new fixed assets plus net expenditure on second-hand fixed assets, whether for additions or replacements. Expenditure on new road works (or upgrading existing roads) is included, but expenditure on road repair and maintenance is classified as government's final consumption expenditure.

Gross fixed capital formation – private

Expenditure on fixed assets. Expenditure on repair and maintenance of fixed assets is excluded, being chargeable to the production account. Additions to fixed assets are capital formation. Also included is a compensation of employees and other costs paid by private enterprise in connection with its own-account capital formation. Expenditure on mineral and petroleum exploration is gross fixed capital formation.

Gross fixed capital formation - public corporations

Expenditure on new fixed assets plus net expenditure on second-hand fixed assets and including both additions and replacements. Also included is a compensation of employees and other costs paid by public corporations in connection with capital works undertaken on their account.

Gross mixed income of unincorporated enterprises

The surplus or deficit accruing from production by unincorporated enterprises. It includes elements of both compensations of employees (returns on labor inputs) and operating surplus (returns on capital inputs). Also included are estimates of the imputed income derived from subsistence agriculture and other informal production activities.

Gross national disposable income (GNDI)

Is equivalent to gross national income plus all secondary income in cash or kind receivable by resident institutional units from the rest of the world (i.e. remittances), less all secondary income in cash or kind payable by resident institutional units to the rest of the world.

Gross national expenditure

The total expenditure within a period by Timor-Leste residents on final goods and services (i.e. excluding goods and services used up during the period in the process of production). It is equivalent to gross domestic product plus imports of goods and services less exports of goods and services.

Gross national income (GNI)

The aggregate value of gross primary incomes for all institutional sectors, including net primary income receivable from non-residents.

Gross national savings

It is calculated as gross national disposable income, less final consumption expenditures of households, general government and non-profit institutions serving households. Gross national savings is the surplus generated in the reference year and available to finance investments, including in fixed capital formation.

Gross operating surplus

The operating surplus accruing to all enterprises, except unincorporated enterprises, from their operations in Timor-Leste. It is the excess of gross output over the sum of intermediate consumption, compensation of employees, and taxes, less subsidies on production and imports. It is calculated before the deduction of consumption of fixed capital, dividends, interest, royalties and land rent, and direct taxes payable. Gross operating surplus is also estimated for the general government, and it equals the general government's consumption of fixed capital.

Gross value added

The value of output in Timor-Leste National Accounts at producer's prices, minus the value of intermediate consumption at purchaser's prices. The term is used to describe gross product by industry. It includes Compensation of employees, Taxes on products and others on production and imports, less subsidies on products and others on production, Gross Operating Surplus, and Gross Mixed Income.

Implicit price deflator

It is got by dividing a current price value by its real counterpart (the constant price measure). When calculated from the primary national accounting aggregates, such as gross domestic product, implicit price deflators relate to a broader range of goods and services in the economy than that represented by any of the individual price indexes such as the consumer price index.

Imports of goods and services

The value of goods imported and amounts payable to non-residents for the provision of non-factorial services to residents.

Individual consumption

An individual consumption of good or service is one that is gained by a household and used to satisfy the needs and wants of members of that household. Individual goods and services can always be bought and sold on the market, although they may also be provided free, or at prices that are not significant, or as transfers in kind. Individual goods and services are 'private', as distinct from 'public'. *See also Collective consumption.*

Institutional unit

An institutional unit is an economic entity that is capable, in its own right, of owning assets, incurring liabilities, engaging in economic activities and engaging in transactions with other entities.

Intermediate consumption

Comprises the value of the goods and services used as inputs by a process of production, excluding compensation of employees and the consumption of fixed capital.

Inventories

Comprise stocks of outputs that are held at the end of a period by the units that produced them before they're being further processed, sold, delivered to other units or used in other ways and stocks of products acquired from other units used for intermediate consumption or resale without further processing.

Livestock

Livestock assets are classified as either fixed assets or inventories. That livestock used in the production of other products (e.g. breeding stock and dairy cattle) are fixed assets. Inventories cover all other livestock types and include those animals raised for meat or other one-off products (e.g. leather).

Market output

The output that is sold at prices that are economically significant or otherwise disposed of on the market, or intended for sale or disposal on the market.

Net secondary income from non-residents

All transfers to or from non-residents to resident government or private institutional units, which are not payments for goods and services, compensation of employees or property income.

Non-market output

Goods and services produced by an institutional unit that are supplied free or at prices that are not economically significant.

Other subsidies on production

Comprise all subsidies, except subsidies on products, which resident enterprises may receive because of engaging in production. Other subsidies on production include subsidies related to the payroll or workforce numbers, including subsidies payable on the total wage or salary bill, on numbers employed, or on the employment of particular types of persons, e.g. persons with disabilities or persons who have been unemployed for a long period. The subsidies may also be intended to cover some or all of the costs of training schemes organized or financed by enterprises. Subsidies aimed at reducing pollution are also included. See also Subsidies on products.

Other taxes on production

It comprises all taxes that enterprises incur because of engaging in production, except taxes on products. Other taxes on production include taxes related to the payroll or workforce, excluding compulsory social security contributions paid by employers and any taxes paid by the employees themselves out of their wages or salaries. Recurrent taxes on land, buildings or other structures; some business and professional licenses where no service is provided by the Government in return; taxes on the use of fixed assets or other activities; stamp duties; taxes on pollution; and taxes on international transactions.

Output

It comprises those goods and services that are produced within an establishment that become available for use outside that establishment, plus any products produced for own final use.

Primary incomes

Comprise incomes that accrue to institutional units because of their involvement in processes of production or their ownership of assets that may be needed for production.

Property income

Is the income receivable by the owner of a financial asset or a tangible non-produced asset in return for providing funds, or putting a tangible non-produced asset at the disposal of another institutional unit.

Purchasers' price

The amount paid by the purchaser, excluding any deductible tax, to take delivery of a unit of a good or service at the time and place required by the purchaser. The purchaser's price of a good includes any transport charges paid by the purchaser to take delivery at the required time and place.

Secondary income

Comprises receipt and payment of current transfers.

Social assistance benefits in cash to residents

Includes current transfers to persons from general government in return for which no services are rendered or goods supplied. Principal components include scholarships; maternity sickness and unemployment benefits; family allowances; and widows' age, invalid and repatriation pensions.

Statistical discrepancy, SD, SD (E) and SD (P)

Statistical discrepancy is the numerical difference got for the estimation of the same variable using different approaches, sources, and methods. Applied to GDP, there are different approaches, GDP (E) or GDP (P) for example. In TL-NA 2000-2013, given that GDP (E) is the *headline* GDP, then the Statistical Discrepancy is $SD = SD(E) = GDP(E) - GDP(P)$.

Subsidies on products

Subsidies payable per unit of a good or service. The subsidy may be a specific amount of money per unit of a quantity of a good or service, or it may be calculated ad valorem as a specified percentage of the price per unit. A subsidy may also be calculated as the difference between a specified target price and the market price paid by a purchaser. A subsidy on a product becomes payable when the product is produced, sold or imported, but it may also become payable in other circumstances, such as when a product is exported, leased, transferred, delivered or used for own consumption or own capital formation.

Taxes less subsidies on production and imports

Defined as 'taxes on products' plus 'other taxes on production' less 'subsidies on products' less 'other subsidies on production'.

Taxes on production and imports

Comprise 'taxes on products' and 'other taxes on production'. These taxes do not include any taxes on the profits or other income received by an enterprise. They are payable, irrespective of the profitability of the production process. They may be payable on the land, fixed assets or labor employed in the production process, or on specific activities or transactions.

Taxes on products

Taxes payable per unit of some good or service. The tax may be a specific amount of money per unit of a quantity of a good or service (quantity being measured either in terms of discrete units or continuous physical variables such as volume, weight, strength, distance, time). Or it may be calculated ad valorem as a specified percentage of the price per unit or value of the goods or services transacted. A tax on a product becomes payable when the product is produced, sold or imported. Still, it may also become payable in other circumstances, such as when a good is exported, leased, transferred, delivered, or used for own consumption or own capital formation.

Terms of trade

Calculated by dividing the export implicit price deflator by the import implicit price deflator and multiplying by 100.

Total factor income

That part of the cost of producing the gross domestic product that comprises gross payments to factors of production (labor and capital). It represents the value added by these factors in the process of production and is equivalent to gross domestic product less taxes plus subsidies on production and imports.

Wages and salaries

Comprise amounts payable in cash including the value of any social contributions, income taxes, fringe benefits tax, etc., payable by the employee even if they are withheld by the employer for administrative convenience or other reasons and paid to social insurance schemes, tax authorities, etc., on behalf of the employee. Wages and salaries may be paid as remuneration in kind instead of, or besides, compensation in cash. Separation, termination, and redundancy payments are also included in wages and salaries. Wages and salaries are also measured as far as possible on an accrual rather than a strictly cash basis. See also Employers' social contributions; Compensation of employees.
