

Timor-Leste Petroleum Fund

SAA Roadmap

March 2011

Strategy

- We see the strategy framework as having three key dimensions, as set out in the table below.

Element	
1.	Sustainability – returns and spending
2.	Purchasing Power – preserving buying power
3.	Diversification – spreading risk

Forward-looking risk / return trade-off (Normative assumptions, no alpha)

This slide shows the mix of bonds and equities we expect to deliver different levels of real return over the medium term.

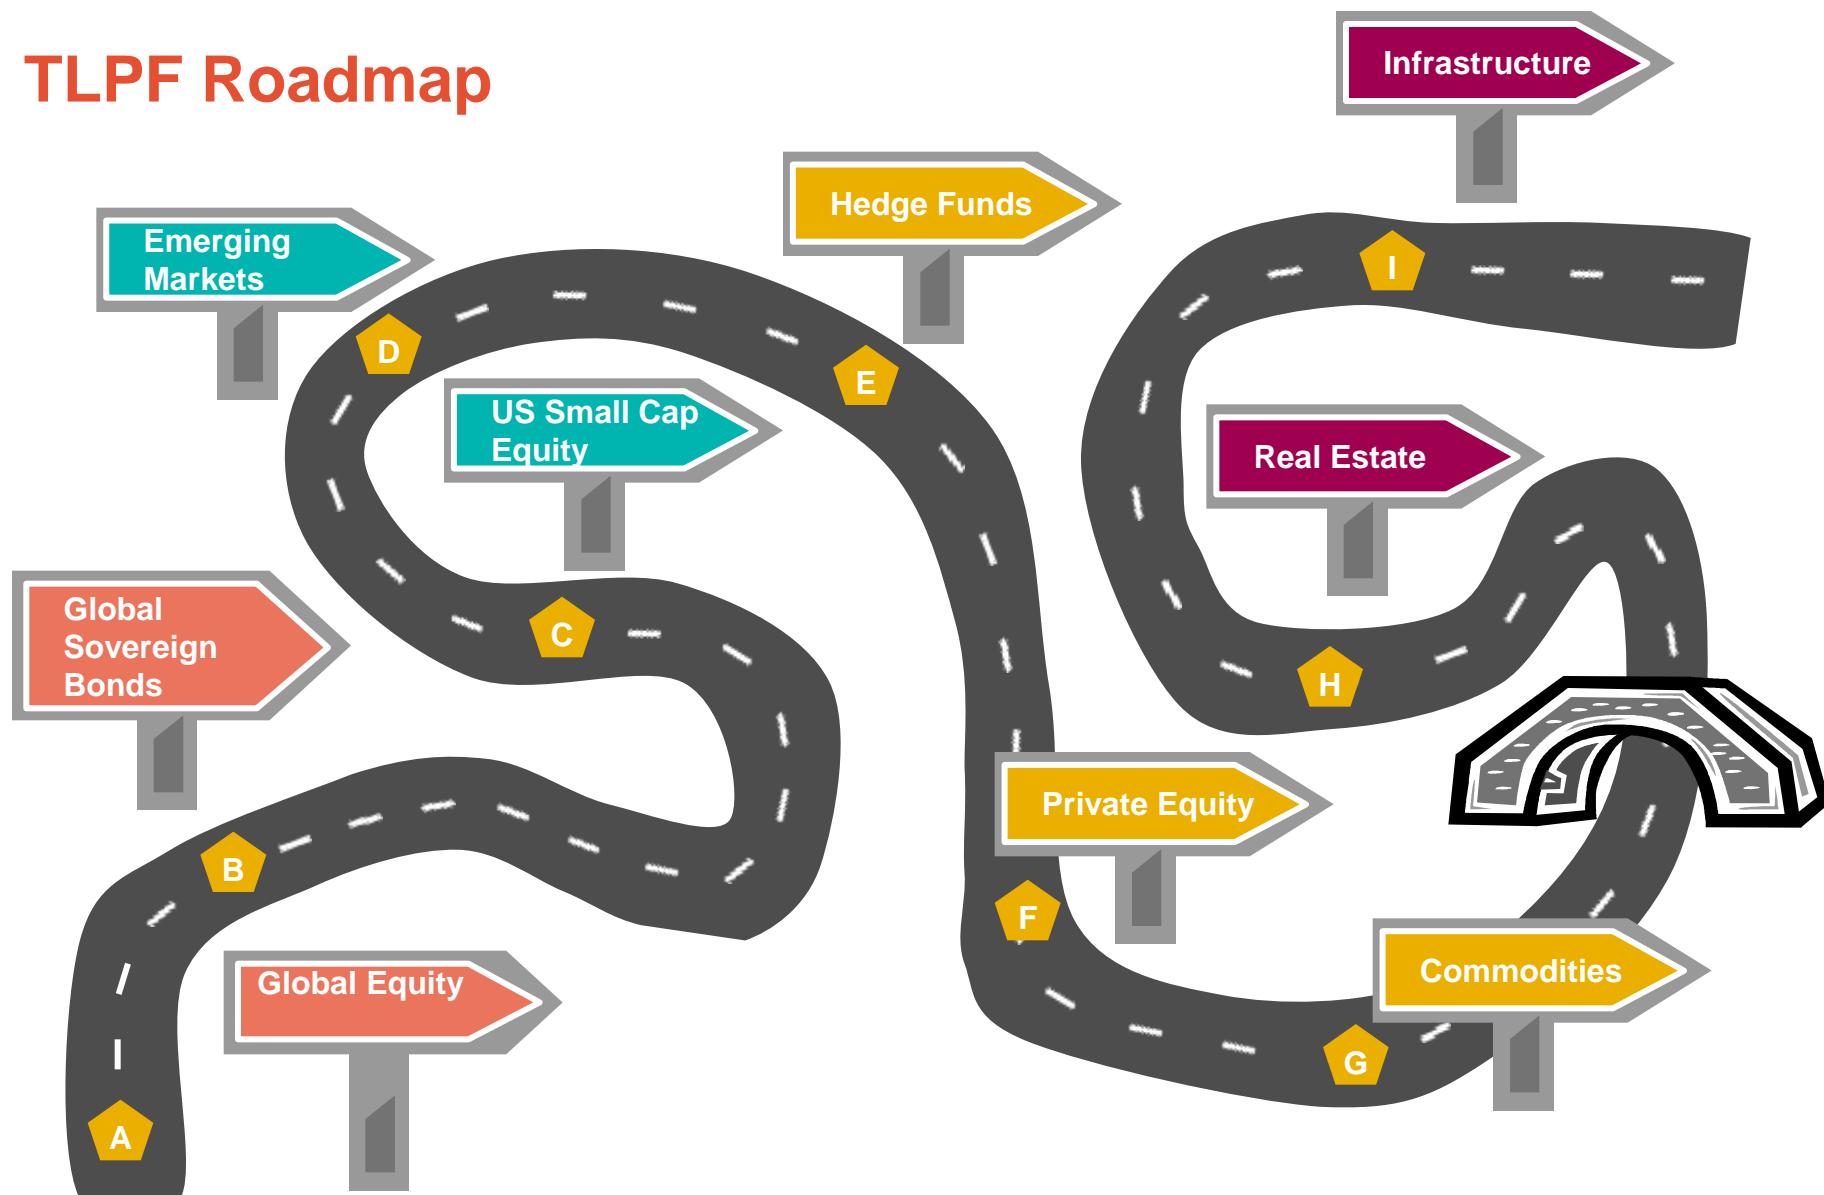

SAA Roadmap – Approach

- We have been driven by six main criteria
 1. Ability
 2. Complexity
 3. Investment Beliefs
 4. Governance
 5. Implementability, and
 6. Monitoring

SAA Roadmap – Approach

- We have considered
 - The split between bonds and equity – the single most important decision the Fund can make.
 - The extent to which systematic “beta” exposures can be introduced
 - A broad range of allocations, including to “alternative” assets
 - The issue of currency and the “numeraire” for the Fund
 - The arguments for and against passive and active management
 - Ongoing measurement and monitoring needs

SAA Roadmap

Ability, Complexity and Governance

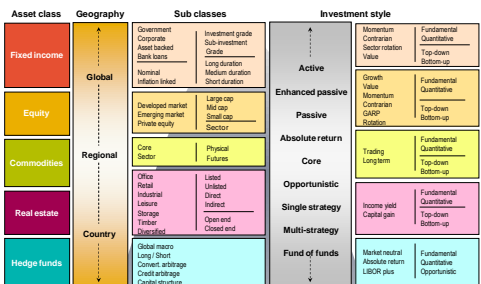

A complex process

The figure below highlight the various asset class dimensions and investment considerations that must be taken in to account when developing an appropriate SAA and in constructing portfolios.

Linking Ability, Complexity and Governance

Complexity

	Current	T1	T2	T3	T4	T5	T6	T7	T8	T9

Cascading structure for TLPF

Any organization has to develop through several phases

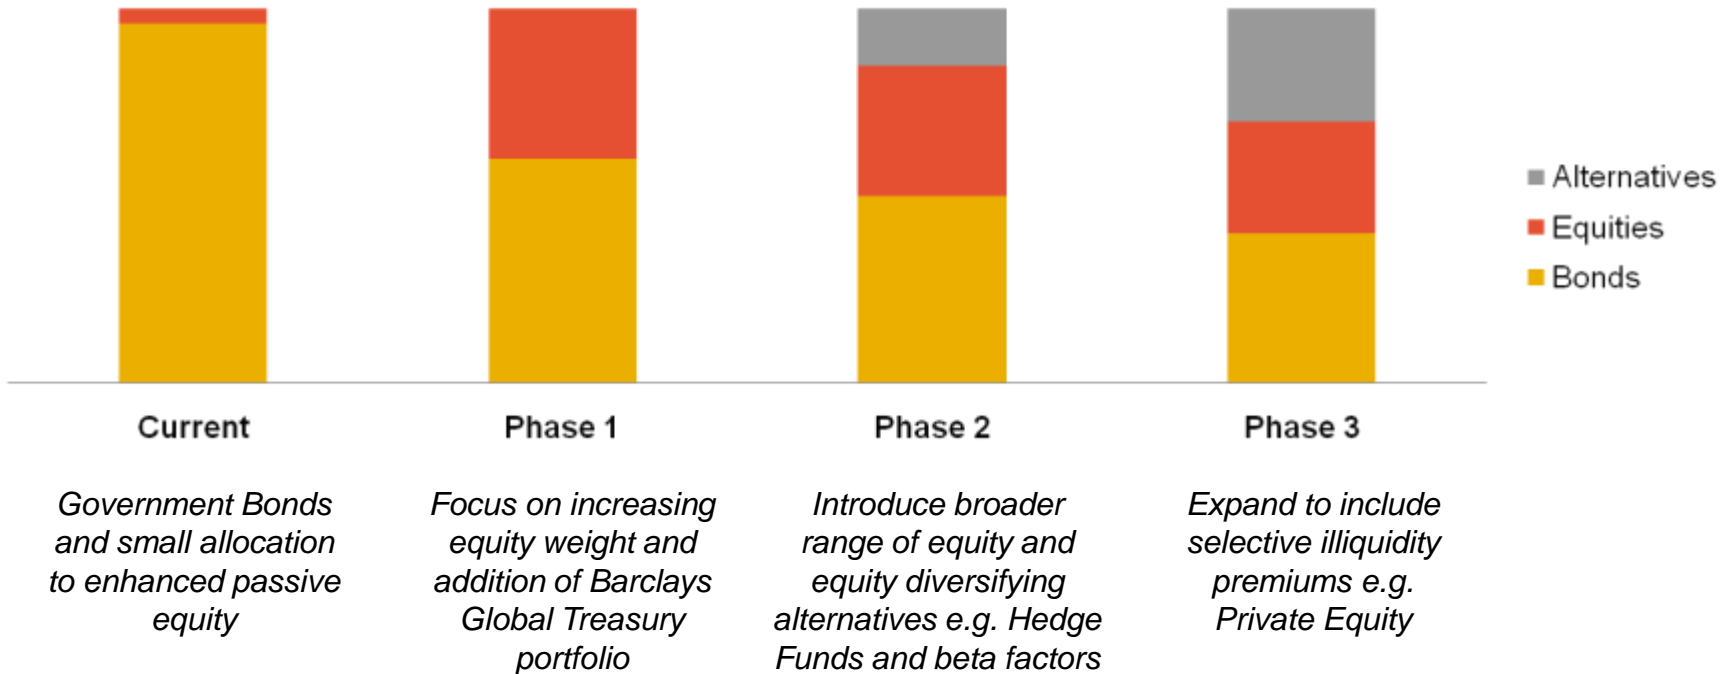

The Timor-Leste Petroleum Fund is a relatively new organization established in 2005, initially with mandate to invest only in US and other sovereign debt instruments. TLPF is entering a new phase in its development (point B, depicted below) facilitated by the proposed changes to the Petroleum Fund law enabling a broader investment mandate to be implemented.

	A to B: Initial Phase	B to C: Development Phase	C to D: Maturity Phase
Characteristics of this phase	Organization has to work from scratch, governance budget develops but with significant gaps	Organization improves its governance budget and begins to close some of the more immediate gaps	Organization seeks to close remaining gaps and may even aspire to move toward a higher level .
TLPF's development	Conservative investment strategy and constraint guidelines, but reasonable governance support via external advisors	PF Law amendments will facilitate wider investment options but significant ability constraints remain.	The Fund will likely reach a point where it must address certain key governance issues and further amend the PF Law to progress further

Governance budget trajectory

Confidentiality and Disclaimer

Confidentiality and Disclaimer

The comments included in this document should be considered in conjunction with the supporting and amplifying verbal comments and background provided by Towers Watson prior to any action or decisions being taken. Past performance data shown in this publication is for the periods stated and should not be used as a basis for projecting future returns of asset classes, investment managers or investment funds or products.

The analysis in this paper is based on a range of assumptions which influence the output and our recommendations. The assumptions have been derived by Towers Watson through a blend of economic theory, historical analysis and the views of investment managers. The assumptions inevitably contain an element of subjective judgement. The assumptions included in the analysis cover the likely future behaviour of the investment markets. These include expected future returns from different asset classes, the likely volatility of those returns, and their inter-relationship. The key component of an asset allocation study is the way in which the assets are modelled. The structure of the Towers Watson asset model is based on historical analysis of investment returns, although Towers Watson has incorporated its subjective judgement to complement the information provided by historical returns. The model is designed to illustrate the future range of returns stemming from different asset classes and their inter-relationship. In particular it should be noted that our timeframe in establishing our asset model and the assumptions used in this study is long-term, and as such it is not intended to be precisely reflective of the likely course of the investment markets in the short-term. Furthermore, our opinions and return forecasts are not intended to imply, nor should be interpreted as conveying, any form of guarantee or assurance by Towers Watson, either to the recipient or any third party, of the future performance of the asset classes in question, either favourable or unfavourable. Past performance should not be taken as representing any particular guide to future performance.

The advice contained in this document should be taken as investment advice only, and is not intended to be actuarial advice. Where relevant, we would encourage you to consider professional actuarial advice in relation to any conclusions that might arise from this document.

This document is provided to the intended recipient solely for its use, for the specific purpose indicated. This document is based on information available to Towers Watson on the document's creation date and takes no account of subsequent developments.
